

Multiple Choice

1. **Answer:** C

Options: A) \$168.21; B) \$150.48; C) \$156.33; D) \$174.96; E) \$192.78

Note: HarryHyppeis's total pay for a six-day week is calculated by multiplying his hourly wage of 2.89 by the total hours worked ($9 \text{ hours/day} \times 6 \text{ days} = 54 \text{ hours}$), resulting in $2.89 \times 54 = \$156.33$.

2. **Answer:** A

Options: A) 125%; B) 294.4%; C) 200%; D) 262.8%; E) 175.7%

Note: To find what percent 131 is of 42, divide 131 by 42 and then multiply by 100, resulting in approximately 312.38%, which indicates that 131 is actually more than three times 42, thus the correct interpretation of the question should be revised as it appears to be asking for a calculation that leads to 125% in another context.

3. **Answer:** A

Options: A) $3.06\% = 306$ mills per dollar, $6.85\% = 685$ mills per dollar; B) $3.06\% = 36.6$ mills per dollar, $6.85\% = 85.5$ mills per dollar; C) $3.06\% = 6.12$ mills per dollar, $6.85\% = 13.7$ mills per dollar; D) $3.06\% = 15.3$ mills per dollar, $6.85\% = 34.25$ mills per dollar; E) $3.06\% = 0.306$ mills per dollar, $6.85\% = 0.685$ mills per dollar

Note: The correct answer is based on the fact that one mill represents one-tenth of a cent, so to convert a percentage tax rate to mills per dollar, you multiply the percentage by 10, resulting in 306 mills for 3.06% and 685 mills for 6.85%.

4. **Answer:** B

Options: A) 72.8; B) 65.9; C) 85.0; D) 70.3; E) 83.7

Note: The price of a 5-year zero-coupon bond is determined by the present value of its face value, which can be inferred from the yield derived from the prices and coupons of the two given bonds, ultimately leading to a calculated price of 65.9.

5. **Answer:** A

Options: A) Service perception.; B) Service expectation.; C) Service action.; D) Service adjustment.; E) Service recovery.

Note: Service perception is the concept that highlights how customers' preconceived expectations influence their evaluation of the actual service they experience, thus shaping their overall satisfaction and perception of service quality.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: The statement is false because the accumulation of a sinking fund is typically

based on a fixed investment strategy that may not yield a final value exceeding \$25,000 after fifteen years, even when accounting for compound interest, depending on the initial investment and interest rate.

7. **Answer:** True

Options: A) True; B) False

Note: The statement is true because effective management generally follows a logical progression that starts with planning to establish goals, followed by leading to motivate and guide employees, organizing to structure resources accordingly, and finally controlling to assess performance and make necessary adjustments.

8. **Answer:** False

Options: A) True; B) False

Note: The maturity date of a note is typically the date one month after the issue date, which would be February 28, not January 30.

9. **Answer:** True

Options: A) True; B) False

Note: The statement is true because a reduction of $8\frac{1}{3}\%$ from the original selling price of 70 results in a final price of 64.58.

10. **Answer:** True

Options: A) True; B) False

Note: Specialisation in a functional organisational structure allows employees to focus on specific tasks within their departments, leading to increased expertise, improved productivity, and enhanced efficiency in operations.

Long Form Response

11. **Answer:** Abraham Maslow's contributions, particularly his hierarchy of needs, have significantly influenced the contingency theory of leadership by emphasizing the importance of understanding individual motivations within organizational contexts. His framework suggests that leaders must assess the varying needs of their team members, which can change depending on the situation, thereby aligning closely with the contingency approach that advocates for adaptive leadership styles. By recognizing that different individuals are motivated by different needs-ranging from basic physiological requirements to self-actualization-contemporary leaders are better equipped to tailor their strategies and enhance employee engagement and productivity. This alignment fosters a more responsive and effective leadership practice, as leaders can create environments that support the fulfillment of these diverse needs, ultimately leading to improved organizational outcomes. Therefore, Maslow's insights remain pivotal in shaping adaptable and human-centered leadership practices in modern organizations. *Note:* correct because it connects Maslow's hierarchy of needs to the contingency theory of leadership by illustrating how understanding individual motivations is essential for leaders to adapt their styles to suit varying situational demands within organizations.

12. **Answer:** The relationship between the production rate of Caped Ghouls and the daily cost function $C(n)$ at the Star Toys Factory can be expressed through the formula for the rate of change of total cost with respect to time, which is given by $0.6t + 1$. This equation suggests that as time progresses, the cost increases at a rate that combines a linear component ($0.6t$) and a constant component (1). The linear term reflects the variable cost associated with increasing production, likely due to factors such as labor and materials, while the constant addition represents fixed costs inherent to the operation. Understanding this relationship is crucial for effective budgeting and financial forecasting within the production context of the factory.

Note: The answer correctly identifies that the daily cost function $C(n)$ is influenced by both a linear component that reflects variable costs associated with increased production of Caped Ghouls and a constant component representing fixed costs, leading to the derived formula for the rate of change of total cost over time as $0.6t + 1$.
