

Multiple Choice

1. **Answer:** A

Options: A) Mobile marketing; B) Social web marketing.; C) Internet marketing; D) Social media marketing

Note: Mobile marketing is the correct answer because it specifically refers to the strategies and techniques that allow organizations to interact and communicate with their target audiences via mobile devices, leveraging the unique capabilities of mobile technology and networks.

2. **Answer:** A

Options: A) Storage warehouses.; B) Distribution centres.; C) Haulage transport.; D) Electronic data interchange.

Note: Storage warehouses are specifically designed to hold and preserve goods for moderate to long periods, making them essential for inventory management and supply chain operations.

3. **Answer:** B

Options: A) participation; B) penetration; C) distribution; D) identification

Note: The correct answer is "penetration" because this stage signifies that a campaign has reached a level of visibility and engagement where it becomes a prominent part of the audience's awareness and consideration.

4. **Answer:** A

Options: A) Clients' questions about costs; B) Resistance to outside advice; C) Superficial grasp of the client's unique problems; D) Personality conflicts

Note: Clients' questions about costs are a common threat to a client-firm relationship because they can indicate dissatisfaction with pricing, lead to mistrust, and create tension that undermines collaboration and communication.

5. **Answer:** B

Options: A) Sustainable sourcing; B) Fair trade; C) Ethical sourcing; D) Supply chain responsibility

Note: Fair trade is defined as a system of exchange that ensures producers in developing countries receive fair compensation, work in safe conditions, and benefit from community development initiatives.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: The term proposition in marketing encompasses not only tangible items but

also intangible offerings such as services, experiences, and brand values that cannot be physically perceived.

7. **Answer:** False

Options: A) True; B) False

Note: Feedback is primarily aimed at facilitating mutual learning and improvement among participants by providing constructive insights rather than merely evaluating performance.

8. **Answer:** False

Options: A) True; B) False

Note: The statement is false because ethical splicing is not a recognized technique in business ethics; rather, it may refer to manipulating or selectively presenting information in a way that can obscure or misrepresent the moral implications of corporate communications and decision-making.

9. **Answer:** False

Options: A) True; B) False

Note: Married women are not necessarily the most vulnerable to reference group influence in their purchasing behavior, as various factors such as individual personality traits, social context, and the nature of the products being purchased can significantly influence their decision-making.

10. **Answer:** True

Options: A) True; B) False

Note: Place or distribution activities encompass the strategies and processes involved in getting products from producers to consumers, ensuring that customer needs are met through effective delivery channels.

Long Form Response

11. **Answer:** Cognitive models play a crucial role in understanding consumer behavior, particularly through the lens of the Theory of Planned Behavior (TPB). This theory posits that an individual's intention to engage in a behavior is influenced by their attitudes, subjective norms, and perceived behavioral control, thereby highlighting the cognitive processes behind decision-making. However, assuming rationality in decision-making can be problematic, as it overlooks the emotional and social factors that often drive consumer choices. This rationality assumption can lead to oversimplified models that fail to account for real-world complexities, ultimately limiting the effectiveness of marketing strategies. Understanding these dynamics is essential for businesses aiming to predict and influence consumer behavior more accurately.

Note: correct because it accurately describes how cognitive models, specifically the Theory of Planned Behavior, elucidate the cognitive processes influencing consumer intentions while also critiquing the oversimplification of decision-making by assuming rationality, which neglects emotional and social influences.

12. **Answer:** Face validity refers to the extent to which a measure appears to assess what it is intended to measure, based on subjective judgment rather than statistical analysis. In data analysis, an analyst's critical perspective plays a significant role in evaluating data against expectations, as it shapes their interpretation of results and the perceived relevance of the data. A strong critical perspective allows analysts to identify potential biases and limitations in the data, thereby enhancing the credibility of their conclusions. Ultimately, while face validity is an important initial assessment, it must be complemented by rigorous statistical validation to ensure comprehensive and reliable data analysis.

Note: correct because it accurately defines face validity as a subjective assessment of whether a measure aligns with its intended purpose, while also emphasizing how an analyst's critical perspective can reveal biases and improve the interpretation of data in relation to established expectations.
