Long Form Response

11. **Answer:** The socio-technical systems perspective enhances job satisfaction and productivity in work design by emphasizing the interdependence between social and technical elements within an organization. By recognizing that employees are not just cogs in a machine but integral parts of a system, organizations can create work environments that foster collaboration and engagement. For example, implementing flexible work arrangements and utilizing collaborative technologies can lead to increased autonomy and communication among team members, resulting in higher job satisfaction. Additionally, well-designed workflows that consider both human and technological capabilities can streamline processes, reduce burnout, and enhance overall productivity. Thus, integrating socio-technical principles into work design creates a more holistic approach that benefits both employees and organizational outcomes.

Note: correct because it highlights the importance of integrating social and technical factors in work design, demonstrating how this approach can enhance employee engagement and productivity through practical examples like flexible work arrangements and collaborative technologies.

12. **Answer:** The "Outputs" stage in Macnamara's pyramid of evaluation is significant as it serves as a critical measure of the immediate results of media efforts, specifi-

cally in terms of media coverage. This stage focuses on quantifying the volume, reach, and tone of media mentions, which provides organizations with valuable insights into their visibility and public perception. By analyzing outputs, businesses can assess the effectiveness of their communication strategies and identify areas for improvement. Furthermore, measuring outputs allows organizations to connect their media coverage to broader organizational goals, ultimately facilitating better decision-making and resource allocation. Thus, the Outputs stage is essential in evaluating the impact of media initiatives and ensuring alignment with strategic objectives.

Note: correct because it highlights the importance of the "Outputs" stage in evaluating media efforts by quantifying media coverage metrics, which allows organizations to gauge their visibility and effectiveness in communication strategies.
