

Multiple Choice (10 marks)

1. The _____ can cost you money, by sending text messages from your mobile phone numbers.
 - (a) IM - Trojans
 - (b) Backdoor Trojans
 - (c) SMS Trojan
 - (d) Ransom Trojan
2. The message must be encrypted at the sender site and decrypted at the
 - (a) Sender Site
 - (b) Site
 - (c) Receiver site
 - (d) Conferencing
3. What are the types of scanning?
 - (a) Port, network, and services
 - (b) Network, vulnerability, and port
 - (c) Passive, active, and interactive
 - (d) Server, client, and network
4. Which of the following is not a security exploit?
 - (a) Eavesdropping
 - (b) Cross-site scripting
 - (c) Authentication
 - (d) SQL Injection
5. In MD-5 the length of the message digest is
 - (a) 160
 - (b) 128
 - (c) 64
 - (d) 54

True / False (10 marks)

Answer True or False

6. True or False: Public key encryption is faster than symmetric key cryptography, making it more efficient for all encryption tasks.
7. True or False: WPA 2 was designed to enhance security on wireless networks by providing an easy method for device connections.
8. True or False: The Cotton Road was a well-known Dark Web platform primarily used for trading legal goods and services.
9. True or False: IM-Trojans are malicious programs designed to steal login credentials for instant messaging applications.
10. True or False: To verify a digital signature, the receiver's private key is necessary to confirm the sender's identity.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the importance of stealthiness in penetration testing, analyzing the strategies employed to minimize detection by security systems and their implications for test effectiveness.
12. Discuss the role of SNMP enumeration in cybersecurity, focusing on the tools used for this process and the implications of their use in network security assessments.
