 - (a) \$599.69
 - (b) \$744.40
 - (c) \$681.47
 - (d) \$880

True / False (10 marks)

Answer True or False

6. True or False: The economies and diseconomies of scale are typically analyzed in the short-run context of production.
7. True or False: A price floor is typically set below the equilibrium price to encourage higher consumer spending on goods.
8. True or False: GDP is calculated annually by the Bureau of Economic Analysis to measure a country's economic performance.
9. True or False: In a standard unrestricted tri-variate VAR(4) model, a total of 6 parameters need to be estimated for all equations, excluding intercepts.
10. True or False: A cross-price elasticity of +2.0 implies that goods X and Y are complementary goods, as their demand moves in opposite directions.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Analyze the effects on price and quantity in the market for roses when supply decreases and demand increases simultaneously, discussing the implications of these shifts on market equilibrium.
12. Discuss the application of the $MC = MR$ rule in the context of labor hiring decisions in a perfectly competitive market, focusing on the relationship between MRC and MRP.
