 - (d) vertical below full employment.

True / False (10 marks)

Answer True or False

6. True or False: A negative externality in the market occurs when resources are overallocated to the production of a good, harming society.
7. True or False: According to Classical economic theory, a decrease in the money supply will raise the price level in the economy.
8. True or False: When nominal GDP rises, consumers demand less money for transactions, which decreases the interest rate.
9. True or False: Monetarists believe that the velocity of money (V) and the quantity of money (Q) are stable over time.
10. True or False: The aggregate demand curve is a horizontal summation of the demand curves for individual goods in the market.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the predictable economic consequences of import quotas, focusing on how they affect consumer prices and resource allocation among producers.
12. Discuss the effects of a rise in the real interest rate on the demand for a nation's currency, its value, and the implications for net exports. Provide specific examples to support your analysis.
