

Multiple Choice

1. **Answer:** D

Options: A) Educational opportunities; B) Environmental appeals or dislikes; C) Changes in life cycle; D) Political party affiliation

Note: Political party affiliation is not typically a direct cause for migration, as migration is more commonly influenced by factors such as economic opportunities, environmental conditions, and social or political conflicts rather than individual political beliefs.

2. **Answer:** D

Options: A) Singapore; B) Italy; C) Spain; D) Mongolia

Note: Mongolia faces a serious trade disadvantage due to its landlocked location, which limits direct access to international shipping routes and increases transportation costs to neighboring countries.

3. **Answer:** D

Options: A) Language; B) Religion; C) Oceans; D) Tolerant complaisant citizens

Note: Tolerant complaisant citizens promote acceptance and openness to new cultural traits, thereby facilitating rather than hindering diffusion.

4. **Answer:** D

Options: A) boundaries.; B) common features.; C) relative location.; D) easily defined.

Note: Regions are often characterized by shared cultural, physical, or economic traits, but their boundaries can be ambiguous and not easily defined.

5. **Answer:** B

Options: A) Destination; B) Origin point; C) All locations along the diffusion path; D) Axis point

Note: The term "hearth" refers to the geographic origin or starting point of a cultural trait, where it first developed before spreading to other areas.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: Spanish colonial architecture and urban migration are primarily associated with Latin America and the southwestern regions of the United States, rather than being most commonly found throughout North America as a whole.

7. **Answer:** False

Options: A) True; B) False

Note: The European city model typically features a concentric pattern with distinct zones such as the central business district, inner suburbs, and outer suburbs, rather than a radial pattern with evenly dispersed residential areas.

8. **Answer:** False

Options: A) True; B) False

Note: The multiplier effect refers to the increase in economic activity resulting from an initial spending increase, not the ratio of urban to rural workers.

9. **Answer:** False

Options: A) True; B) False

Note: A primate city is defined as a city that is significantly larger and more influential than any other city in the country, while a global financial hub refers specifically to a city that is a center for international financial services, which does not necessarily mean it is the largest or most dominant city in its nation.

10. **Answer:** True

Options: A) True; B) False

Note: In a federal state, power is divided between the central government and regional governments, allowing each to govern specific areas independently rather than functioning as a single unified entity.

Long Form Response

11. **Answer:** Mediterranean farming is characterized by a hot, dry climate with mild, wet winters, which influences the types of crops that can be successfully grown in this region. Crops like olives, grapes, and chickpeas exemplify this agricultural practice as they thrive in the well-drained soils and require less water, making them ideal for the Mediterranean climate. Olives are cultivated for their oil and can endure drought conditions, while grapes are essential for winemaking and flourish in sunny environments. Chickpeas, on the other hand, are a drought-resistant legume that enriches the soil with nitrogen, supporting sustainable farming. Together, these crops reflect the adaptability and resourcefulness of Mediterranean agriculture.

Note: correct because it identifies the distinctive climate conditions of the Mediterranean region and illustrates how crops like olives, grapes, and chickpeas are well-suited to thrive in these conditions due to their drought resistance and adaptation to the local environment.

12. **Answer:** Mary experiences significant trade-offs living in a densely populated area. On one hand, she benefits from easy access to amenities such as shops, parks, and restaurants, which enhance her daily life and provide convenience. However, this proximity comes at the cost of reduced privacy, as she is surrounded by many people and may feel crowded or observed. These factors can impact her quality of life by increasing stress due to noise and lack of personal space, while also offering social opportunities and activities that she might not have in a less populated area. Ultimately, Mary must

weigh the advantages of accessibility against the disadvantages of living closely with others.

Note: The answer correctly identifies the dual nature of Mary's experience in a densely populated area, emphasizing how the convenience of nearby amenities is counterbalanced by the stress and lack of privacy, ultimately affecting her overall quality of life.
