

Multiple Choice

1. **Answer:** B

Options: A) Ethnic; B) Universalizing; C) Monotheistic; D) Polytheistic

Note: The term "universalizing" best describes a religion that actively seeks to spread its beliefs and practices to a global audience, often through the efforts of missionaries.

2. **Answer:** C

Options: A) Diffusion; B) Centrifugal; C) Centripetal; D) Ethnocentric

Note: The term "centripetal" describes forces that unify and strengthen a country by fostering national cohesion and promoting stability through shared values, culture, and governance.

3. **Answer:** A

Options: A) government programs for birth control and planning.; B) famine relief.; C) increased spending in social welfare programs.; D) increased total fertility rates.

Note: The correct answer highlights how neo-Malthusianism, which emphasizes the need to control population growth to prevent resource depletion, has influenced government initiatives aimed at promoting birth control and family planning to manage population sizes sustainably.

4. **Answer:** C

Options: A) A shorter workweek made time for a commute possible.; B) Changes in the housing mortgage regulations made home ownership easier.; C) Fixed-route public transit routes increased in importance.; D) Improved automobiles made transportation easier and less limited.

Note: The statement "Fixed-route public transit routes increased in importance" does not describe a factor that contributed to suburbanization, as the rise of suburbs was largely facilitated by the decline of reliance on public transit in favor of automobile ownership and personal transportation.

5. **Answer:** B

Options: A) Dixie; B) Pennsylvania; C) The market area of Winn-Dixie; D) The Pacific Northwest

Note: Pennsylvania is a formal region because it is defined by specific geographic boundaries and recognized political borders, distinguishing it as a distinct area within the larger context of the United States.

True / False

6. **Answer:** True

Options: A) True; B) False

Note: Streetcar and trolley lines allowed for the expansion of urban areas outward from the central business district, leading to a star-shaped city pattern as neighborhoods developed along these transportation routes.

7. **Answer:** False

Options: A) True; B) False

Note: The statement is false because early settlements and high population density along coastlines and rivers are primarily driven by access to water resources, fertile land for agriculture, and trade opportunities, rather than limited forest cover.

8. **Answer:** False

Options: A) True; B) False

Note: American Samoa is not a state but a territory of the United States, meaning it does not have the same level of sovereignty or representation in Congress as the states do.

9. **Answer:** True

Options: A) True; B) False

Note: Untouchables, also known as Dalits, are considered outside the traditional caste hierarchy in Hinduism and historically faced social exclusion and discrimination, which is why the statement is true.

10. **Answer:** True

Options: A) True; B) False

Note: Africa has the highest total fertility rates among all continents primarily due to a combination of cultural, social, and economic factors that promote larger family sizes, including lower access to contraception and differing societal norms regarding childbearing.

Long Form Response

11. **Answer:** A globe allows for the accurate depiction of geographical distance, direction, size, and shape because it represents the Earth in three dimensions, just like the planet itself. This spherical model maintains the true proportions of landmasses and bodies of water, enabling viewers to see how they relate to one another in size and distance. Unlike flat maps, which can distort these features due to their two-dimensional nature, a globe preserves angles and shapes, making it easier to understand geographical relationships. Thus, globes are more effective than other representations for visualizing the Earth's geography because they provide a realistic perspective that aids in learning and comprehension.

Note: correct because a globe accurately represents the Earth's three-dimensional shape, preserving true proportions and relationships of geographical features, which flat maps cannot achieve due to inherent distortions in two-dimensional representations.

12. **Answer:** Creole languages are unique linguistic systems that emerge from the blending of two or more languages, typically in contexts where speakers of different languages need to communicate, such as in trade or colonization. They often have simplified grammar and a vocabulary based largely on one language, influenced by others. Hindi, however, does not fit into this category because it is a direct descendant of Sanskrit and has evolved naturally over time within a specific cultural context, rather than being a mixture of multiple languages arising from a need for communication among diverse groups. This distinction highlights that while creole languages are formed through contact and necessity, Hindi is a more traditional language with deep historical roots. *Note:* correct because it accurately defines creole languages as products of language blending in contact situations with simplified structures, while contrasting Hindi's origin as a direct descendant of Sanskrit that evolved within a specific cultural context, thereby distinguishing it from creole languages.
