

## Multiple Choice

1. **Answer:** A

*Options:* A) Rice; B) Wheat; C) Barley; D) Millet

*Note:* Rice is considered the crop that began the Third Agricultural Revolution due to its significant role in the development of high-yielding varieties and advances in agricultural technology that greatly improved food production and security globally.

2. **Answer:** C

*Options:* A) will hinder global trade.; B) make plants more resistant to disease.; C) may cause irreversible changes in humans.; D) make plants more resistant to drought.

*Note:* Opponents of GMOs are concerned that the introduction of genetically modified organisms into the food supply could lead to unforeseen and potentially permanent health impacts on humans due to the long-term effects of consuming altered genetic material.

3. **Answer:** D

*Options:* A) Buddhism; B) Christianity; C) Islam; D) Hinduism

*Note:* Hinduism is considered one of the oldest religions in the world, with roots tracing back over 4,000 years in the Indian subcontinent, predating the other major world religions listed.

4. **Answer:** D

*Options:* A) It changed centuries-old methods of farming.; B) It was an attempt to feed a growing world population.; C) It centered on increased rice, wheat, and maize yields.; D) It greatly improved crop yields in sub-Saharan Africa.

*Note:* The correct answer is that the Green Revolution primarily benefited countries in Asia and Latin America, but did not significantly increase crop yields in sub-Saharan Africa, where many of the agricultural advancements were not adopted.

5. **Answer:** D

*Options:* A) Islam and Judaism; B) Judaism and Buddhism; C) Hinduism and Buddhism; D) Christianity and Buddhism

*Note:* Christianity and Buddhism are both considered universalizing religions because they seek to spread their beliefs and practices to all people, regardless of cultural or ethnic backgrounds, in contrast to ethnic religions that are more localized.

## True / False

6. **Answer:** False

*Options:* A) True; B) False

*Note:* Higher-paying jobs elsewhere are considered pull factors that attract individuals to new locations rather than push factors that cause them to leave their current ones.

7. **Answer:** True

*Options:* A) True; B) False

*Note:* Hindi is classified as an Indo-Aryan language because it evolved from the ancient Indo-Aryan languages and has a distinct grammatical structure and vocabulary, rather than being a creole, which typically arises from the mixing of languages in a specific sociolinguistic context.

8. **Answer:** False

*Options:* A) True; B) False

*Note:* Fishing, while significant in coastal economies, is not the most widespread primary economic activity globally; agriculture and forestry cover larger areas and support more people.

9. **Answer:** False

*Options:* A) True; B) False

*Note:* A megalopolis refers to a large urban area that encompasses multiple cities and their suburbs, often characterized by high population density and economic integration, rather than being defined by its size relative to the largest city in a country.

10. **Answer:** False

*Options:* A) True; B) False

*Note:* Urbanization refers to the increasing population and development of urban areas, but it does not inherently lead to the decline of inner-city neighborhoods, as urbanization can also involve revitalization and growth in these areas.

## Long Form Response

11. **Answer:** Circular migration refers to the movement of people between their home country and another country for work, often in cycles. This concept is particularly relevant for farm workers from other countries who travel to places like the United States during harvest seasons. Factors influencing circular migration include demand for labor in agriculture, seasonal work patterns, and economic conditions in both the home and host countries. The implications of this type of migration can be significant, as it allows workers to earn money while also maintaining ties to their families and communities back home. However, it can also lead to challenges such as social integration and labor rights issues in the host country.

*Note:* correct because it accurately defines circular migration, identifies the specific context of farm workers, and addresses the influencing factors and implications of such migration.

12. **Answer:** Isobar maps are significant in geography because they visually represent atmospheric pressure across different regions, using lines called isobars that connect points of equal pressure. By analyzing these maps, meteorologists can identify areas

of high and low pressure, which play a crucial role in determining weather patterns. For example, low- pressure areas are often associated with stormy weather, while high- pressure systems typically bring clear skies. Understanding how atmospheric pressure affects wind movement and temperature helps forecasters predict weather changes more accurately. Thus, isobar maps are essential tools for understanding and forecasting the weather.

*Note:* correct because it accurately describes how isobar maps illustrate atmospheric pressure variations, which are essential for identifying weather patterns and making accurate weather forecasts.
