

Multiple Choice

1. **Answer:** C

Options: A) racial segregation.; B) miscegenation.; C) cultural pluralism.; D) cultural segregation.

Note: Cultural pluralism refers to a societal framework where diverse cultural groups coexist and retain their distinct identities, which is exemplified by the presence of multiple population groups maintaining their unique cultures within a shared geographic space.

2. **Answer:** A

Options: A) an antecedent boundary.; B) a geometric boundary.; C) a relict boundary.; D) a subsequent boundary.

Note: An antecedent boundary is established based on physical features or cultural divisions that existed before detailed geographic knowledge and mapping were developed, distinguishing it from subsequent boundaries that are created with more modern considerations.

3. **Answer:** C

Options: A) A shorter workweek made time for a commute possible.; B) Changes in the housing mortgage regulations made home ownership easier.; C) Fixed-route public transit routes increased in importance.; D) Improved automobiles made transportation easier and less limited.

Note: Fixed-route public transit routes typically serve urban areas and do not directly contribute to suburbanization, which is characterized by people moving away from city centers to more residential areas.

4. **Answer:** A

Options: A) Religious differences; B) A national holiday; C) An attack by another country; D) A charismatic national leader

Note: Religious differences can create divisions within a country, leading to social fragmentation and weakening national unity, which exemplifies a centrifugal force in geography.

5. **Answer:** A

Options: A) the world.; B) Atlanta, Georgia.; C) Main Street, Small Town, Ohio.; D) Pennsylvania.

Note: The world map uses the smallest scale because it represents the largest area, thereby covering vast distances with less detail, which necessitates a smaller ratio of map distance to actual distance.

True / False

6. **Answer:** True

Options: A) True; B) False

Note: Health care is a major concern in countries with a large and rapidly aging population because an older demographic typically requires more medical services and support, leading to increased demand for health care resources and challenges in providing adequate care.

7. **Answer:** True

Options: A) True; B) False

Note: Replacement level refers to the number of children each woman needs to have to ensure that, on average, the population size remains stable by compensating for deaths and maintaining the population across generations.

8. **Answer:** True

Options: A) True; B) False

Note: Variations in vocabulary, pronunciation, and rhythm in a spoken language are classified as dialects because they represent distinct forms of a language that develop within specific geographical regions or social groups.

9. **Answer:** False

Options: A) True; B) False

Note: The statement is false because subsistence economies can advance through factors such as improved agricultural practices, access to education, and community cooperation, rather than solely relying on a currency system.

10. **Answer:** True

Options: A) True; B) False

Note: National sports teams, flags, national anthems, and national holidays serve as symbols and expressions of a country's identity and values, fostering unity and pride among citizens, which ultimately reinforces a sense of nationalism.

Long Form Response

11. **Answer:** A globe accurately represents true geographical distance, direction, size, and shape because it is a three-dimensional model of the Earth, reflecting its spherical nature. Unlike flat maps, which can distort these features due to projection methods, a globe maintains the correct proportions and spatial relationships between landmasses and bodies of water. This accuracy is significant in geography, as it helps students understand concepts like latitude and longitude, the curvature of the Earth, and how distances between places relate in real life. By using a globe, learners gain a clearer perspective of the world's geography, which is essential for grasping global relationships and navigation. Overall, globes serve as an effective educational tool in conveying the complexities of our planet.

Note: correct because it emphasizes that a globe's three-dimensional representation

preserves the true geographical relationships of distance, direction, size, and shape, which flat maps often distort, thereby enhancing the understanding of essential geographic concepts like latitude, longitude, and the Earth's curvature.

12. **Answer:** The development of streetcar and trolley lines significantly influenced the creation of star-shaped city patterns by extending from the central business district (CBD) outward. These transportation routes allowed people to live farther from the city center while still being able to commute easily to work or access services. As a result, neighborhoods sprang up along these lines, creating a star-like shape as the lines radiated outwards. This urban design not only facilitated the growth of suburbs but also contributed to social segregation, as different income groups often settled in separate areas based on proximity to the streetcar lines. Economically, it encouraged the development of new businesses along the routes, shaping the urban landscape and influencing the social dynamics of the city.

Note: correct because it articulates how streetcar and trolley lines extended from the central business district, enabling suburban growth along these routes and resulting in a star-shaped urban layout that had significant social and economic implications.
