

## Multiple Choice (10 marks)

1. Older adults are most likely to be involved in a traffic accident when they are
  - (a) Alone
  - (b) Driving during peak traffic hours
  - (c) In a parking lot
  - (d) On a highway
  - (e) Driving at night
2. What is the minimum time a stretch should be held for?
  - (a) 2-3 minutes.
  - (b) 30-50 seconds.
  - (c) 0-10 seconds.
  - (d) 1-2 minutes.
  - (e) 10-30 seconds.
3. Which of the following muscles initiates elevation of the mandible?
  - (a) Buccinator
  - (b) Orbicularis oris
  - (c) Trapezius
  - (d) Frontalis
  - (e) Sternocleidomastoid
4. High levels of self-care behaviors have been associated with high levels of
  - (a) Extraversion
  - (b) Primary control
  - (c) Narcissism
  - (d) Openness to experience
  - (e) Conscientiousness
5. When branched chain amino acids are deaminated in muscle, the ammonia produced is mostly:
  - (a) converted into citrulline and released from the muscle.
  - (b) converted into urea and released from the muscle.
  - (c) used to synthesise purines and pyrimidines in the muscle.
  - (d) converted into alanine and glutamine and released from the muscle.
  - (e) converted into glycine and released from the muscle.

## True / False (10 marks)

*Answer True or False*

6. True or False: Fast-twitch muscle fibers contain a relatively large number of mitochondria and high ATPase activity.
7. True or False: A normal resting heart rate for an adult is generally considered to be between 70 and 90 beats per minute.
8. True or False: Huntington disease is known to exhibit anticipation, particularly with paternal transmission of the mutated gene.
9. True or False: Eosinophilic oesophagitis can be effectively cured with lifestyle modifications alone.
10. True or False: The disenchantment phase is the retirement phase that occurs least frequently among individuals transitioning from work to retirement.

## Long Form Response (20 marks)

*Answer each question with a clear and complete explanation.*

11. Discuss the role of proprioceptive information in the functioning of the temporomandibular joint, specifically focusing on the contributions of the masseteric and auriculotemporal nerves.
12. Discuss the effectiveness of various nutritional strategies, specifically analyzing why the classic glycogen loading regime may not enhance performance during prolonged endurance exercise.
