

Multiple Choice (10 marks)

1. A major difference between programmed and unprogrammed theories of senescence is that programmed theories
 - (a) Attribute senescence only to environmental factors
 - (b) Are far too difficult to test
 - (c) Claim that senescence follows a predetermined plan
 - (d) Rely too heavily on computer models
2. Which of the following conditions shows anticipation in paternal transmission?
 - (a) Huntington disease
 - (b) Marfan syndrome
 - (c) Cystic fibrosis
 - (d) Fragile X syndrome
3. A problem for immune system theories of senescence is
 - (a) Determining what first causes the senescence in the immune system
 - (b) Auto-immune disorders are far too rare
 - (c) That the immune system does not decline with age
 - (d) The lack of information about senescence in general
4. Arabidopsis is advantageous for plant genetic research because:
 - (a) it is commercially important as a food crop
 - (b) it is an endangered species
 - (c) it is the closest to humans of any existing plant
 - (d) it is a small plant with a small genome size which can be raised inexpensively
5. Freud said that the penis first becomes the major focus of pleasure-seeking at:
 - (a) birth
 - (b) about age 1
 - (c) between the ages of 3 and 6
 - (d) puberty

True / False (10 marks)

Answer True or False

6. True or False: An increase in neuroticism later in life is a strong predictor of enhanced social support.
7. True or False: The ascending colon is a section of the small intestine located after the ileum.
8. True or False: The zona pellucida is a protective layer that surrounds the egg, playing a crucial role in fertilization.
9. True or False: Psychoanalytic theory attributes changes in behavior due to exposure to erotica primarily to unconscious desires and conflicts.
10. True or False: Cohort effects can significantly influence the prevalence of alcoholism across different age groups in a population.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the importance of testing for chlamydia in pregnant individuals, considering the potential complications it may cause for both maternal and fetal health.
12. Discuss the typical sperm count in a human ejaculate, its biological significance, and the factors that can influence this count in reproductive health.
