

Multiple Choice

1. **Answer:** B

Options: A) the discovery of figurines made from clay at the Trinil site.; B) recovery of a shell at the Trinil site with an intentionally engraved series of lines.; C) the use of complex tools requiring a high level of cognitive function.; D) cave paintings and elaborate burials with numerous grave goods at the Trinil site.; E) all of the above.

Note: The recovery of a shell with intentionally engraved lines at the Trinil site suggests that *Homo erectus* engaged in symbolic thinking and creative expression, indicating the potential for an aesthetic sense and the creation of art.

2. **Answer:** A

Options: A) mobiliary art.; B) long-distance trade of exotic raw materials.; C) parietal art.; D) a Venus figurine.

Note: The "Lion Man" from Hohlenstein-Stadel cave is considered mobiliary art because it is a portable sculpture created during the Upper Paleolithic period, reflecting the artistic expression and cultural practices of prehistoric humans.

3. **Answer:** C

Options: A) Mayan; B) Kwakiutl; C) Mississippian; D) Inca; E) Clovis

Note: The correct answer is the Mississippian people because Hernando de Soto's expedition in the 1540 s encountered advanced societies in the southeastern United States that were part of the Mississippian culture, known for their complex mound-building and agricultural practices.

4. **Answer:** D

Options: A) the early migrants were not human.; B) the early migrants did not contribute to the genetic pool of modern Native Americans.; C) the early migrants were a separate species.; D) craniometrics is an unreliable method of tracking populations.; E) skull shapes can change dramatically over generations.

Note: The mismatch between the skulls of early migrants to the New World and those of modern Native Americans indicates that craniometric measurements may not accurately reflect genetic or population continuity over time, thus questioning the reliability of this method in tracing demographic changes.

5. **Answer:** A

Options: A) the study of plant and animal life from a particular period in history.; B) a study of the spatial relationships among artifacts, ecofacts, and features.; C) the study of human behavior and culture.; D) a technique to determine the age of artifacts based on their position in the soil.; E) a dating technique based on the decay of a radioactive isotope of bone.

Note: Taphonomy focuses on the processes of decay, preservation, and the fossilization

of organisms, which allows researchers to study the plant and animal life from specific historical periods.

True / False

6. **Answer:** False

Options: A) True; B) False
