

Multiple Choice

1. **Answer:** D

Options: A) at the beginning of the film; B) about half way through the film; C) 90 minutes into the film; D) during the final 3 seconds of the film

Note: The correct answer is that the earliest members of the human family appear during the final 3 seconds of the film because this illustrates the vast time scale of the universe's history, where human existence is a relatively recent development compared to the age of the cosmos.

2. **Answer:** D

Options: A) diastema.; B) cranium.; C) maxilla.; D) sagittal crest.

Note: The sagittal crest is a prominent ridge of bone that runs along the top of the skull in some primates, including *Australopithecus robustus*, providing an attachment point for strong jaw muscles, which indicates a diet requiring significant chewing.

3. **Answer:** D

Options: A) jade, bronze, and ceramic artifacts.; B) chariots and horses.; C) the headless bodies of humans who had been sacrificed.; D) all of the above.

Note: The correct answer is "all of the above" because the royal graves of the Shang Dynasty were characterized by the inclusion of various burial items, such as valuable artifacts, sacrificial offerings, and large quantities of goods, reflecting the wealth and status of the deceased kings.

4. **Answer:** D

Options: A) unilineal evolution.; B) environmental uniformitarianism.; C) multicultural adaptation.; D) multilineal evolution.

Note: Multilineal evolution refers to the concept that cultures evolve and adapt in various ways based on their unique environments and circumstances, rather than following a single, linear path of development.

5. **Answer:** C

Options: A) defensive stronghold.; B) shrine to the Inca rain god.; C) relaxing getaway for elites.; D) astronomical observatory.

Note: Machu Picchu was constructed as a royal estate for Inca elites, serving as a luxurious retreat that showcased their power and connection to the divine in a serene mountain setting.

True / False

6. **Answer:** True

Options: A) True; B) False

Note: A person who believes that the Earth's features are primarily shaped by sudden, dramatic events rather than gradual processes is referred to as a catastrophist, making the statement true.

7. **Answer:** True

Options: A) True; B) False

Note: The Denali Complex is indeed recognized as a lithic technology in the Arctic characterized by the production and use of micro-blades, bifacial knives, and burins, which were essential for survival in the region's harsh environment.

8. **Answer:** False

Options: A) True; B) False

Note: Mayan city-states were characterized by a decentralized political structure with individual rulers and varying governance practices, unlike the more unified and centralized governance of ancient Egyptian communities.

9. **Answer:** True

Options: A) True; B) False

Note: The statement is true because the mean cranial capacities of premodern Homo sapiens, Neandertals, and modern Homo sapiens are supported by anthropological data and research that document these averages.

10. **Answer:** True

Options: A) True; B) False

Note: The statement is true because early hominids, such as Australopithecus, exhibited bipedalism, allowing them to walk upright on two legs, which is a defining characteristic of human evolution.

Long Form Response

11. **Answer:** Burials with exotic grave goods in ancient societies serve as important indicators of social stratification and inequality. These grave goods, which often included valuable items like jewelry, fine ceramics, or imported materials, suggest that the individual held a high status within the community. Furthermore, the bones found in these burials often reveal that these individuals engaged in less strenuous labor compared to lower-status members of society, indicating a division of labor that reinforced social hierarchy. This contrast highlights how access to resources and the lifestyle associated with higher social status were often linked to the intensity of labor one performed. Thus, the presence of exotic grave goods not only reflects wealth and power but also illustrates the broader social dynamics that shaped ancient communities.

Note: correct because it illustrates how the presence of exotic grave goods signifies high social status and correlates with evidence of less strenuous labor, thereby highlighting the division of labor and social inequality in ancient societies.

12. **Answer:** Archaeologists characterize the societies that constructed the monumental structures at Göbekli Tepe, Watson Brake, and Poverty Point as affluent foragers.

These groups were not yet fully agricultural but had developed complex lifestyles that allowed them to thrive by effectively managing resources in their environments. They gathered a wide variety of wild foods and hunted animals, using their knowledge of local ecosystems to ensure a stable and abundant food supply. The construction of large, elaborate structures suggests that these communities had social organization and cooperation, enabling them to come together for significant projects. Overall, their ability to sustain a rich lifestyle without reliance on farming indicates a sophisticated understanding of resource management.

Note: correct because it highlights that the societies at Göbekli Tepe, Watson Brake, and Poverty Point were affluent foragers who managed resources effectively and maintained complex lifestyles without fully adopting agriculture, demonstrating their advanced understanding of local ecosystems.
