

Multiple Choice

1. **Answer:** B

Options: A) Homo habilis; B) Australopithecus afarensis; C) Homo sapiens; D) Australopithecus robustus

Note: Lucy belongs to the species Australopithecus afarensis because she is one of the most famous and complete fossil specimens of this early hominin, providing critical evidence of bipedalism and human evolution.

2. **Answer:** B

Options: A) finely carved obsidian statuary.; B) decorated stepped platforms.; C) the introduction of chocolate into the Mesoamerican economy.; D) a ritual ball game in which the losers were sacrificed to the gods.

Note: Decorated stepped platforms indicate advanced architectural skills and social organization, reflecting the complexities of Mayan society around 2650 B.P.

3. **Answer:** A

Options: A) Miocene.; B) Pliocene.; C) Triassic.; D) Cambrian.

Note: The Miocene epoch, which occurred approximately 23 to 5 million years ago, is characterized by the emergence and diversification of early primates, marking the period when our earliest non-human primate relatives first appeared.

4. **Answer:** C

Options: A) ritual starvation, torture, and blood sacrifice.; B) elite-sponsored feasts in which captives of war were beheaded.; C) improved diet, the use of coca leaves, and consumption of maize beer.; D) communal feasts and the torture of captives to be sacrificed.

Note: The correct answer highlights that among the Inca, the practice of human sacrifice was often linked to a state of heightened spiritual and physical readiness facilitated by an improved diet, the use of coca leaves for stimulation, and the consumption of maize beer, which was integral to their rituals and ceremonies.

5. **Answer:** C

Options: A) 100; B) 500; C) 1,000; D) 5,000

Note: The correct answer is 1,000 because archaeological evidence suggests that the palace at Knossos, a significant center of Minoan civilization, was an extensive complex featuring around 1,000 interconnected rooms utilized for various functions such as administration, storage, and residence.

True / False

6. **Answer:** True

Options: A) True; B) False

Note: Joseph Tainter's analysis of the collapse of ancient civilizations primarily emphasizes factors such as resource depletion, social complexity, and economic challenges, rather than epidemic disease as a significant cause.

7. **Answer:** False

Options: A) True; B) False

Note: The Ancestral Puebloans abandoned Mesa Verde due to a combination of factors, including prolonged drought, resource depletion, and social changes, rather than solely in search of more fertile land.

8. **Answer:** False

Options: A) True; B) False

Note: The Moche royal cemeteries were discovered through archaeological excavations and research, not by a flock of sheep accidentally falling into a tomb.

9. **Answer:** True

Options: A) True; B) False

Note: The presence of a significant quantity and variety of grave goods buried with the children at Sungir' suggests that the tribe recognized and practiced a system of social stratification, where inherited status influenced the wealth and resources allocated at burial, indicating a complex social structure.

10. **Answer:** False

Options: A) True; B) False

Note: Most caves with ancient paintings are often found in remote locations and protected areas, making them less accessible and typically more expensive to visit due to conservation efforts.

Long Form Response

11. **Answer:** Parietal and mobile art from the Upper Paleolithic period demonstrate significant advancements in human intellect and provide insights into the culture of that time. Parietal art, which includes cave paintings, showcases complex imagery and themes, suggesting a deep understanding of symbolism and possibly spiritual beliefs. Mobile art, such as small carvings and figurines, reflects creativity and skill in manipulating materials. Together, these art forms indicate that Upper Paleolithic societies valued artistic expression and storytelling, which likely played a role in social cohesion and the transmission of knowledge. This artistic development reveals a culture rich in imagination and communication, highlighting the cognitive evolution of early humans. *Note:* correct because it identifies how both parietal and mobile art exemplify advanced cognitive abilities and creative expression, indicating a complex cultural and symbolic understanding in Upper Paleolithic societies.

12. **Answer:** Uruk is significant as one of the world's first cities, with an estimated population of around 10,000 people during its peak. This large population marked a shift from small, nomadic groups to a settled, urban society, which laid the groundwork for complex social structures and governance. The development of Uruk facilitated advancements in technology, trade, and culture, leading to innovations such as writing and monumental architecture. As one of the earliest examples of urbanization, Uruk played a crucial role in the growth of early civilizations, influencing how people lived, worked, and interacted with one another in the ancient world.

Note: The answer correctly identifies Uruk's significance as a pioneering urban center with a substantial population that catalyzed the transition from nomadic lifestyles to complex societies, fostering advancements in governance, technology, trade, and culture essential for the development of early civilizations.
