

Multiple Choice

1. **Answer:** D

Options: A) were domesticated at the same time at communal farms.; B) were domesticated before groups became sedentary.; C) were independently domesticated in Europe; D) were imported from other regions.

Note: The correct answer is supported by the fact that during the European Neolithic, essential crops such as wheat and barley were not native to Europe but were instead introduced from the Fertile Crescent and other regions through trade and migration.

2. **Answer:** B

Options: A) clay tablets that represent the earliest known form of writing in the world; B) mud-brick structures built over elite tombs that were subsequently developed into pyramids; C) irrigation canals that allowed for the production of agricultural surpluses in Egypt; D) the ritual headdress of the religious-political leaders of Mesopotamia

Note: Mastabas were ancient Egyptian tomb structures made of mud-brick that served as precursors to pyramids, as they were designed to honor and protect the burial sites of the elite.

3. **Answer:** A

Options: A) Europe; B) Africa; C) Asia; D) Australia

Note: Most of the Venus figurines, which are prehistoric statuettes characterized by exaggerated female features and often associated with fertility, have been discovered primarily in Europe, particularly in regions such as France and Austria, underscoring the continent's significance in early human art and culture.

4. **Answer:** C

Options: A) increased reliance on farming; B) decreased reliance on shellfish; C) greater regional differentiation; D) active trading between the North and South

Note: The correct answer is "greater regional differentiation" because during the North American Archaic period, diverse environmental conditions and resources led to distinct subsistence strategies that varied significantly across different regions, reflecting adaptations to local ecological contexts.

5. **Answer:** D

Options: A) Halafian ritual monuments; B) megalithic chiefdoms; C) surplus food storage centers; D) regal-ritual centers

Note: Archaeologists have characterized the monuments built by the Olmec as regal-ritual centers because these structures served both as political hubs for leadership and as sites for religious ceremonies, reflecting the complex society of the Olmec civilization.

True / False

6. **Answer:** True

Options: A) True; B) False

Note: The appearance of decorated stepped platforms around 2650 B.P. indicates early complexity in Mayan societies as it reflects advancements in architectural skills, social organization, and the ability to mobilize labor and resources for monumental construction.

7. **Answer:** True

Options: A) True; B) False

Note: The Gault site in Texas is located near significant deposits of high-quality chert, which Paleoindians utilized for crafting effective stone tools, making the site a strategic choice for their habitation and resource use.

8. **Answer:** True

Options: A) True; B) False

Note: Uniformitarianism is true because it posits that the geological processes observed in the present, such as erosion and sedimentation, have operated in a similar manner throughout Earth's history, thus emphasizing the gradual and consistent nature of these processes over time.

9. **Answer:** False

Options: A) True; B) False

Note: Kiva parties are spiritual and ceremonial gatherings primarily held by Pueblo tribes for religious purposes, rather than celebrations centered on wealth transfer between tribes.

10. **Answer:** False

Options: A) True; B) False

Note: The statement is false because humans and chimpanzees share a common ancestor that lived millions of years ago, but humans did not directly descend from chimpanzees; instead, both species evolved separately from that shared ancestor.

Long Form Response

11. **Answer:** The Hopewell culture, which thrived between 200 BCE and 500 CE in the eastern United States, relied on a diverse array of crops for their subsistence practices. Key crops included sunflowers, squash, and various types of beans, which provided essential nutrients and supported a balanced diet. Interestingly, maize was not a significant part of their agricultural system during this period. This is likely because the climate and ecological conditions in their region were more conducive to the growth of the other crops, and the cultivation of maize became more prominent in later cultures as agricultural techniques and environmental conditions evolved. Thus, the Hopewell people's agricultural practices reflected their adaptation to local resources rather than a reliance on maize.

Note: correct because it accurately identifies the primary crops that sustained the Hopewell culture and explains the climatic and ecological reasons for the limited role of maize in their agricultural practices during that time.

12. **Answer:** Civilization is characterized by four key elements: food surpluses, specialists, urban settlements, and a system of record keeping. Food surpluses allow societies to support larger populations by providing enough resources for people to settle and thrive, rather than constantly searching for food. Specialists emerge when not everyone needs to farm, leading to varied trades and professions that enhance innovation and efficiency within the society. Urban settlements create centers for trade, culture, and governance, fostering social interactions and economic growth. Lastly, a system of record keeping is essential for managing resources, laws, and history, allowing civilizations to maintain order and continuity over time. Together, these characteristics contribute to the development and sustainability of complex societies by promoting organization, collaboration, and advancement.

Note: correct because it clearly identifies and elaborates on the four essential characteristics of civilization—food surpluses, specialists, urban settlements, and record keeping—demonstrating how each element fosters population growth, economic diversity, social organization, and the preservation of knowledge, all of which are vital for the development and sustainability of complex societies.
