 - (d) All the above
5. Taphonomy is:
 - (a) a systematic classification based on similarities and differences.
 - (b) a dating technique based on the decay of a radioactive isotope of bone.
 - (c) a study of the spatial relationships among artifacts, ecofacts, and features.
 - (d) the study of how materials ended up in a particular place.

True / False (10 marks)

Answer True or False

6. True or False: The discovery of caribou bones suggests that these animals were imported into the United States from Canada at that time.
7. True or False: An archaeological artifact is a place where people lived and worked in ancient times.
8. True or False: Crop irrigation systems were not developed until later agricultural periods, not during the Mesolithic.
9. True or False: Palynology is the study of pollen, which helps scientists reconstruct plant communities and climate conditions.
10. True or False: A forensic anthropologist studies human skeletons to help solve crimes and identify individuals.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the significance of stratigraphy in understanding Earth's history. How does the study of the Earth's layers contribute to our knowledge of past events and environments?
12. Discuss the characteristics and significance of the Solutrean and Magdalenian traditions in prehistoric cultures, focusing on their distinct tool-making techniques and materials used.
