

Multiple Choice

1. **Answer:** D

Options: A) dependence on megafauna.; B) hunting and gathering.; C) dependence on fur-bearing animals.; D) diversity.

Note: The correct answer is diversity because post-Pleistocene Europe experienced a variety of environments and ecosystems that supported a wide range of plant and animal species, which in turn provided multiple food sources for human populations.

2. **Answer:** A

Options: A) Australopithecus afarensis; B) Homo naledi; C) Homo neanderthalensis; D) Neanderthals; E) Homo floresiensis

Note: The correct answer is Australopithecus afarensis because fossil evidence shows that this hominid species, characterized by its bipedalism and adaptations for both walking and climbing, emerged around 3.9 to 2.9 million years ago, predating the 1.8 million-year mark when significant hominid evolution was occurring.

3. **Answer:** E

Options: A) They had no domesticated animals but hunted wild animals for meat.; B) They had domesticated animals, but they did not consume their meat.; C) They bred and raised a specific species of deer for food.; D) They were vegetarian and did not consume meat.; E) They brought animals to the site from outside of the region.

Note: The analysis of animal teeth revealed that the animals were not native to the immediate area, indicating that the builders of Stonehenge transported them from outside the region for their construction and ceremonial practices.

4. **Answer:** A

Options: A) soon after 60,000 years ago; B) approximately 50,000 years ago; C) no earlier than 100,000 years ago; D) soon after 30,000 years ago; E) no later than 70,000 years ago

Note: Most archaeologists agree that the occupation of Australia began soon after 60,000 years ago due to evidence from archaeological sites, such as artifacts and human remains, that indicate the presence of early human inhabitants during this time frame.

5. **Answer:** A

Options: A) the study of plant and animal life from a particular period in history.; B) a study of the spatial relationships among artifacts, ecofacts, and features.; C) the study of human behavior and culture.; D) a technique to determine the age of artifacts based on their position in the soil.; E) a dating technique based on the decay of a radioactive isotope of bone.

Note: Taphonomy is correctly defined as the study of plant and animal life from a particular period in history because it examines the processes of decay, preservation,

and the formation of fossil records, which provide insights into past ecosystems and biological diversity.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: The correct answer is: the method was tending to produce bipartite stemmas regardless of the actual history of the witnesses.

7. **Answer:** True

Options: A) True; B) False

Note: According to the passage: 132 AD

8. **Answer:** True

Options: A) True; B) False

Note: According to the passage: four

9. **Answer:** True

Options: A) True; B) False

Note: According to the passage: Feminist

10. **Answer:** True

Options: A) True; B) False

Note: According to the passage: 1 November 1950

Long Form Response

11. **Answer:** allowing smoking

Note: Expected answer: allowing smoking

12. **Answer:** Koilis, Halis, Dagis, Dhaugris, Dasa, Khasas, Kinnars, and Kirats

Note: Expected answer: Koilis, Halis, Dagis, Dhaugris, Dasa, Khasas, Kinnars, and Kirats

End of Answer Key
