

Multiple Choice

1. **Answer:** C

Options: A) found in everyday objects; B) only found in art; C) not of this world; D) found only in human-made objects; E) only found in the human body

Note: Plato's philosophy asserts that true beauty exists in the realm of the Forms, which is an abstract, perfect reality beyond the physical world, making the correct answer "not of this world."

2. **Answer:** B

Options: A) Murtipujaka; B) Digambara; C) Agama; D) Yapaniya; E) Jain Yoga

Note: The Digambara sect of Jainism holds that women can only attain a state of semi-renunciation due to their belief that women must be reborn as men to achieve full liberation, thus restricting their leadership in asceticism compared to the Svetambara sect, which allows women to achieve full renunciation.

3. **Answer:** B

Options: A) phenomenology; B) logic; C) cosmology; D) bioethics; E) ethics

Note: Logic is considered one of the four main divisions of philosophy because it focuses on the principles of valid reasoning and argumentation, which are essential for philosophical inquiry and discourse.

4. **Answer:** A

Options: A) how the decision to preserve the environment benefits the environment.; B) how the destruction of the environment affects the economy.; C) why people who preserve the environment might be good people.; D) how destroying the environment affects future generations.; E) why the act of destroying nature might be immoral.

Note: Hill emphasizes the importance of understanding the positive impacts of environmental preservation, focusing on the benefits gained from such decisions rather than solely contemplating the moral implications of destruction.

5. **Answer:** C

Options: A) 13; B) 18; C) 24; D) 60; E) 5

Note: The correct answer is 24 because, according to Jain philosophy, there are a total of 24 Tirthankaras, or Jinas, who have attained enlightenment and served as spiritual teachers during our current time cycle known as the "Avasarpini."

True / False

6. **Answer:** True

Options: A) True; B) False

Note: The statement is true because in predicate logic, the expression Lhf correctly

represents the relationship of love between the individual constants h (Holly) and f (Frances) by using the predicate L to denote the action of loving.

7. **Answer:** False

Options: A) True; B) False

Note: Utilitarianism emphasizes the importance of considering the rights and dignity of individuals, asserting that it is morally unacceptable to use someone merely as a means to an end, even if doing so could maximize overall happiness.

8. **Answer:** False

Options: A) True; B) False

Note: Nussbaum argues that Aristotle's virtue terms are not solely determined by societal norms but are also grounded in human nature and the pursuit of human flourishing, which transcends mere conventional use.

9. **Answer:** False

Options: A) True; B) False

Note: The statement is false because the search for life's meaning encompasses a diverse range of philosophical perspectives beyond just determinism and free will, including existentialism, nihilism, and various religious interpretations.

10. **Answer:** False

Options: A) True; B) False

Note: Hobbes defines 'animal motion' as any form of movement, whether voluntary or involuntary, that occurs in response to physical forces, not specifically as voluntary behavior in response to environmental stimuli.

Long Form Response

11. **Answer:** In Gardiner's article, the concept of "the fragmentation of agency" highlights the complexity of attributing responsibility for climate change to individual actions within a vast network of contributors. This fragmentation underscores that climate change is not solely the result of identifiable agents but rather a collective outcome of diverse interactions among individuals, corporations, and governments. The implications of this understanding are profound; it challenges the notion of moral responsibility by complicating accountability, as each agent's contribution can be minimal yet collectively significant. This perspective urges a reevaluation of ethical frameworks surrounding climate action, advocating for systemic change rather than solely individual accountability, thereby emphasizing the need for collaborative solutions that engage all contributors. Ultimately, recognizing the fragmentation of agency invites a deeper inquiry into how we conceptualize responsibility in the face of global challenges like climate change.

Note: The answer correctly identifies that "the fragmentation of agency" reveals the complexity of responsibility in climate change, emphasizing that it arises from a collective interaction of various contributors rather than individual actions alone, which challenges traditional moral accountability.

12. **Answer:** The fallacy of accident occurs when a generalization is improperly applied to a specific case, leading to erroneous conclusions. This fallacy arises when an exception to a rule is overlooked, resulting in a misapplication of the general principle. For instance, if one argues that "all birds can fly" and concludes that a penguin can fly, they fail to recognize that this generalization does not account for specific exceptions. Such misapplications not only distort logical reasoning but also undermine the validity of arguments, as they ignore the nuanced realities that exist within categories. Therefore, the fallacy of accident illustrates the importance of careful analysis in philosophical discourse, emphasizing that generalizations must be contextually applied to avoid misleading conclusions.

Note: The answer correctly identifies the fallacy of accident as a logical error that occurs when a generalization is improperly applied to a specific case without acknowledging exceptions, exemplified by the flawed assertion that all birds can fly, which ignores non-flying species like penguins.
