

## Multiple Choice

1. **Answer:** D

*Options:* A) Fallacy of composition; B) Complex cause; C) Red herring; D) False sign; E) Hasty generalization

*Note:* "Ad lazarum" refers to a logical fallacy where an argument is deemed false simply because it is associated with a particular individual or group, thus classifying it as a false sign rather than a valid reason.

2. **Answer:** A

*Options:* A) cause behavior; B) are the same as behavioral states; C) exist; D) can be directly observed; E) are always visible

*Note:* Logical behaviorism posits that mental states can be fully described by observable behaviors, which undermines the commonsense intuition that our internal mental states, such as beliefs and desires, are causal factors that influence our actions.

3. **Answer:** A

*Options:* A) a capitalist.; B) a feminist.; C) an anarchist.; D) a socialist.; E) a distributionist.

*Note:* Van den Haag is considered a capitalist because he advocates for the principles of free market economics and individual property rights, emphasizing the moral legitimacy of capitalism in his philosophical arguments.

4. **Answer:** A

*Options:* A) the concept of combatants and noncombatants is outdated and irrelevant.; B) "terrorism" should be defined as violence against noncombatants.; C) there is no difference between combatants and noncombatants.; D) the difference between combatants and noncombatants is largely ambiguous.; E) the difference between combatants and noncombatants is categorical and clear.

*Note:* Valls argues that the traditional distinction between combatants and noncombatants fails to reflect the complexities of modern warfare, where civilian populations are often directly affected and involved in conflict, rendering this dichotomy outdated and irrelevant.

5. **Answer:** B

*Options:* A) does not prove that government officials ought to promote it.; B) does not prove that you ought to do it.; C) proves that you ought not to do it.; D) proves that you ought to do it, too.

*Note:* Sinnott-Armstrong argues that moral obligations of a government do not necessarily translate to individual moral obligations, as collective responsibility differs from personal responsibility in ethical considerations.

## True / False

6. **Answer:** True

*Options:* A) True; B) False

*Note:* Moore asserts that many philosophers erroneously equate the concept of 'good' with natural properties or facts, thus committing the naturalistic fallacy by failing to recognize that 'good' is a non-naturalistic, indefinable quality.

7. **Answer:** True

*Options:* A) True; B) False

*Note:* Mill's philosophy emphasizes that justice entails strong duties that demand compliance regardless of personal inclination, whereas other moral obligations represent weaker duties that allow for more personal discretion, thereby justifying the distinction he makes between these concepts.

8. **Answer:** True

*Options:* A) True; B) False

*Note:* Baxter asserts that the introduction of new species can enhance biodiversity and ecological resilience, which are crucial for restoring ecological balance in the face of environmental challenges.

9. **Answer:** True

*Options:* A) True; B) False

*Note:* Metz argues that human dignity is intrinsically linked to our ability to engage in meaningful relationships with others, emphasizing that the essence of dignity is expressed through our social interactions and communal bonds.

10. **Answer:** False

*Options:* A) True; B) False

*Note:* Macedo argues that while societies have a duty to promote justice and equality, this does not necessarily extend to ensuring equal wealth for all individuals, particularly nonmembers, as moral obligations may differ based on membership and social contract theories.

## Long Form Response

11. **Answer:** The principle that "the minor premise must affirm the antecedent or deny the consequent" is crucial for evaluating the validity of arguments, particularly in identifying red herring fallacies in philosophical discourse. A red herring argument diverts attention from the main issue by introducing irrelevant information, thereby failing to engage with the original logical structure. By applying the aforementioned principle, one can ascertain that if the minor premise does not affirm the antecedent of the argument in question, it becomes clear that the discussion has strayed from its logical foundation. Consequently, identifying a red herring involves recognizing how the introduced premises do not align with the necessary conditions of the original argument, leading to a breakdown of valid reasoning. This evaluation underscores the importance

of maintaining focus on the relevant premises to uphold sound philosophical discourse.  
*Note:* correct because it illustrates how a red herring argument, by introducing irrelevant information, fails to either affirm the antecedent or deny the consequent, thus violating the logical structure necessary for valid reasoning in philosophical discourse.

12. **Answer:** The argument  $H \rightarrow (\sim I \vee J), H \rightarrow \sim J / \sim I$  is invalid. By constructing an indirect truth table, we can demonstrate a counterexample where  $J$  is true,  $H$  is false, and  $I$  is also false. In this scenario, the premises  $H \rightarrow (\sim I \vee J)$  and  $H \rightarrow \sim J$  hold true, yet the conclusion  $\sim I$  does not, as it evaluates to true. This indicates that the premises do not necessarily lead to the conclusion, highlighting the argument's invalidity and suggesting that the relationship among the variables is not as straightforward as the argument implies. The implications of this invalidity point to the need for careful scrutiny of logical structures in philosophical discourse to avoid erroneous conclusions.

*Note:* correct because it effectively demonstrates the invalidity of the argument by providing a specific counterexample where the premises are true but the conclusion is false, thereby illustrating that the premises do not guarantee the truth of the conclusion.
