

Multiple Choice

1. **Answer:** C

Options: A) It indicated the primacy of economic containment; B) It indicated a desire to engage with the Soviet Union; C) It indicated a shift towards military containment; D) It dispensed with the idea of containment

Note: NSC 68 is seen as a turning point in US Cold War foreign policy because it marked a deliberate transition from a strategy of containment focused on ideological opposition to one that emphasized military buildup and preparedness in response to perceived Soviet aggression.

2. **Answer:** C

Options: A) Liberty; B) Equality; C) Autocracy; D) Individualism

Note: Autocracy is not a component of the 'American Creed' because the creed is fundamentally based on principles of democracy, individual rights, and equality, which directly oppose autocratic governance.

3. **Answer:** B

Options: A) The US ignored the Third World; B) Local developments were viewed through a geopolitical lens; C) The US unreservedly supported decolonization; D) None of the above

Note: The correct answer highlights that during the Cold War, U.S. perceptions of the Third World were heavily influenced by the geopolitical struggle between capitalism and communism, leading to a tendency to interpret local events and movements in terms of their implications for global power dynamics rather than their specific cultural or historical contexts.

4. **Answer:** A

Options: A) Business networks; B) Computer experts; C) Anti-virus industry; D) Computer networks

Note: Business networks are primarily concerned with organizational structures and communication within enterprises, whereas technical discourse on cybersecurity focuses on protective measures, technologies, and protocols specific to safeguarding digital information and systems.

5. **Answer:** B

Options: A) The character of a state's leader; B) The distribution of power in the international system; C) The distribution of power within a state's governmental system; D) A state's political ideology

Note: Systemic theories assert that the structure of the international system, particularly the distribution of power among states, shapes their foreign policy decisions by influencing their interactions and strategies in a competitive environment.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: Kennedy did not assert that Japan's rise would lead to an immediate decline of all Western economies; rather, he recognized the potential for competition and economic interdependence among nations.

7. **Answer:** False

Options: A) True; B) False

Note: International institutions address a wide range of issues, including security and conflict resolution, as they seek to promote stability and cooperation among states beyond just economic cooperation.

8. **Answer:** False

Options: A) True; B) False

Note: Intergovernmental organizations often lack the necessary authority, resources, and mechanisms to enforce compliance effectively, leading to limited impact on constraining abusive leaders.

9. **Answer:** True

Options: A) True; B) False

Note: Critical Information Infrastructures are deemed the primary referent object in contemporary cyber-security discussions because they are essential for national security, economic stability, and societal well-being, making their protection a top priority in the face of increasing cyber threats.

10. **Answer:** True

Options: A) True; B) False

Note: The George W. Bush administration emphasized unilateral action and often criticized institutions like the United Nations for their perceived inefficiencies, prioritizing American sovereignty and security over multilateral cooperation, which reflects a tendency to weaken rather than strengthen international organizations.

Long Form Response

11. **Answer:** Integrating the security dimensions of infectious disease into the national security framework requires a multifaceted approach that considers political, economic, and social factors. Politically, it is essential to establish robust governance structures and international collaborations to enhance preparedness and response capabilities. Economically, investing in public health infrastructure and research can mitigate the financial impacts of pandemics, ensuring resilience against market disruptions. Socially, public awareness campaigns and community engagement are crucial for fostering trust and compliance with health directives. By recognizing the interconnectedness of these dimensions, policymakers can create a comprehensive strategy that not only addresses immediate health threats but also strengthens overall national security.

Note: correct because it emphasizes the need for a comprehensive strategy that incorporates governance, international collaboration, and economic investment in public health to effectively address the multifaceted challenges posed by infectious diseases within the national security framework.

12. **Answer:** The evolving global security environment will significantly shape the nature of conflicts in the twenty-first century, particularly through the lenses of human migration, resource scarcity, and shifting power dynamics. As global inequalities in power and wealth become more pronounced, disempowered populations will increasingly seek refuge or better opportunities elsewhere, leading to heightened levels of migration. This movement can incite competition for resources in host countries, potentially resulting in violence and conflict. Furthermore, environmental threats such as climate change will exacerbate resource scarcity, creating conditions for conflict over dwindling supplies of essential resources like water and arable land. Ultimately, these dynamics will reflect and reinforce the ongoing transformations in global power structures, as states and non-state actors navigate the complexities of migration and resource competition. *Note:* correct because it effectively connects the impact of global inequalities on human migration and resource competition, illustrating how these dynamics contribute to the evolving nature of conflicts in the twenty-first century.
