Options: A) The responsibility to retaliate.; B) The responsibility to prevent.; C) The responsibility to rebuild.; D) The responsibility to react.

Long Form Response

11. **Answer:** Culture plays a vital role in social constructivism within political science, as it shapes how states perceive security and influences their identity values and rules. By providing a framework of shared practices and meanings, culture helps to define what security threats are recognized and prioritized by a state. For instance, different

cultural contexts can lead to varying interpretations of national interests and the legitimacy of certain actions, such as military interventions. Furthermore, cultural values inform the rules and norms that govern state behavior, ultimately shaping national identity and collective responses to both internal and external challenges. In this way, culture not only informs security perceptions but also constructs the very foundations of political identity and social order.

Note: correct because it articulates how culture, through its shared meanings and practices, directly influences state perceptions of security and the interpretation of national interests, thereby shaping identity values and the legitimacy of state actions in a social constructivist framework.

12. **Answer:** The end of the Cold War significantly impacted warlord politics by facilitating elite-driven disorder in states that experienced collapse. In such environments, weak state elites often resorted to fostering chaos as a means to secure their own power and control over lucrative commercial activities. This exploitation of disorder enabled them to tap into neo-liberal globalized shadow markets, which thrived in lawless conditions and would typically be restricted under stable governance. Consequently, warlord politics emerged as a new form of regime security, where elites prioritized personal gain over state stability, leading to a cycle of violence and economic exploitation that further entrenched their authority.

Note: correct because it identifies the link between state collapse following the Cold War and the emergence of warlord politics, which allowed elite actors to manipulate disorder for personal gain through access to unregulated global markets.
