

Multiple Choice (10 marks)

1. The following measure of general cognitive abilities would be most appropriate for use with a nonverbal adolescent:
 - (a) Wechsler Intelligence Scale for Children-IV
 - (b) Kaufman Assessment Battery for Children-II
 - (c) Cognitive Assessment System-II
 - (d) Woodcock-Johnson IV Tests of Cognitive Abilities
 - (e) Differential Ability Scales-II
2. Which of the following best summarizes why people tend to stay in a slightly elevated state of arousal after a crisis has occurred?
 - (a) Their neurons continue to fire at a rapid pace, keeping them in a state of high alert.
 - (b) Their neurons remain in a state of graded potentiality even after they have fired.
 - (c) Their heart rate remains elevated due to the stress of the crisis.
 - (d) Their muscles remain tense due to the physical exertion of the crisis.
 - (e) Their pituitary gland continues to release stress hormones.
3. Nonverbal and primarily nonculturally biased abilities are referred to as:
 - (a) Broad stratum abilities
 - (b) Crystallized intelligence
 - (c) Abstract reasoning
 - (d) Achievement or aptitude
 - (e) Emotional intelligence
4. According to attribution theorists, an error observers make in formulating causal attributions about the behavior of others is
 - (a) overattributing to person-situation interactions
 - (b) overattributing to personal characteristics
 - (c) overattributing to situations
 - (d) overattributing to unpredictable events
 - (e) underattributing to predictable events
5. The best conclusion that can be drawn about the four-day (compressed) workweek is that it has:

- (a) negative effects on productivity but little or no impact on attitudes.
- (b) positive effects on productivity but negative effects on attitudes.
- (c) long-lasting negative effects on attitudes and productivity.
- (d) positive effects on attitudes but little or no impact on productivity.
- (e) positive effects on productivity but little or no impact on attitudes.

True / False (10 marks)

Answer True or False

- 6. True or False: Vicarious liability is a significant concern for psychologists when they serve in a supervisory capacity over trainees or staff.
- 7. True or False: High shrinkage in multiple correlation coefficients typically suggests that the criterion variable was highly reliable.
- 8. True or False: Adler's individual psychology posits that a child's misbehavior can stem from goals such as seeking attention, revenge, or asserting power.
- 9. True or False: Cognition, emotion, behavior, and environment are the primary factors that determine effective learning outcomes.
- 10. True or False: Individuals who experience work-related accidents often have encountered more recent life stress than those without such accidents.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

- 11. Discuss how individuals low in self-monitoring utilize their life scripts to navigate social situations, and analyze the implications of this reliance on personal narratives in social behavior.
- 12. Discuss the ethical considerations and psychological implications of asking a candidate's age during personnel selection, particularly when age is deemed a bona fide occupational requirement.
