

Multiple Choice (10 marks)

1. Unilateral damage to the left (dominant) hemisphere is least likely to result in an inability to:
 - (a) use the process of elimination to answer multiple-choice questions.
 - (b) interpret visual cues.
 - (c) read a map.
 - (d) perform mathematical calculations.
 - (e) write a coherent sentence.
2. The term "insanity" is a:
 - (a) psychological term for an uncontrollable state of mind.
 - (b) medical term for a severe mental illness.
 - (c) popular (lay) term for a severe mental illness.
 - (d) legal, non-psychiatric term for certain types of mental disorders.
 - (e) legal, non-psychiatric term for a psychotic disorder with an unknown etiology.
3. Alpha waves are most closely associated with
 - (a) Stage 4 sleep
 - (b) Stage 1 sleep
 - (c) REM sleep
 - (d) Stage 3 sleep
 - (e) Deep sleep
4. Which of the following must be done when universal screening data show that very few students are successfully meeting school competencies?
 - (a) The school must invest in more modern educational technology.
 - (b) Students who are not meeting competencies must be placed in lower grade levels.
 - (c) Students must be given more time to develop competencies.
 - (d) The school must hire more teachers to reduce class size.
 - (e) Parents of students not meeting competencies must be contacted for meetings.
5. In Pavlov's conditioning of dogs, the point at which the dogs salivated at the sound of the tone without the food being present is referred to as
 - (a) reinforcement

- (b) an unconditioned stimulus
- (c) conditioned response
- (d) operant conditioning
- (e) generalization

True / False (10 marks)

Answer True or False

6. True or False: Simultaneous presentation of the conditioned and unconditioned stimuli is the best method for achieving classical conditioning.
7. True or False: Mothers' memories of their children's motor development and weight gain are generally the most accurate according to empirical literature.
8. True or False: Social ostracism is the primary factor influencing learning in people with antisocial personalities.
9. True or False: The triarchic theory of intelligence is not a developmental model relevant to the study of intelligence across the lifespan.
10. True or False: Motivation can occur independently of arousal, suggesting that one does not necessarily influence the other.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the concepts of proactive and retroactive interference in memory. How do they illustrate the complexities of information classification and retrieval in cognitive psychology?
12. Discuss how mood influences the processing of information through the central route in the elaboration likelihood model. What implications does this have for persuasive communication?
