

Multiple Choice

1. **Answer:** D

Options: A) when they are not on any form of medication; B) just before beginning antidepressant medication; C) during the first few days after starting antidepressant medication; D) as they begin to recover from their depression; E) during periods of remission from depression

Note: As individuals begin to recover from depression, they may regain the energy and motivation to act on suicidal thoughts, making them more dangerous to themselves during this transitional phase.

2. **Answer:** A

Options: A) Random assignment, temporal precedence; B) Nonspuriousness, temporal precedence; C) Generalizability, causality; D) Temporal precedence, nonspuriousness; E) Temporal precedence, random selection

Note: Random assignment enhances internal validity by ensuring that participants are equally distributed across experimental conditions, while temporal precedence establishes a cause-and-effect relationship necessary for external validity by demonstrating that the cause precedes the effect in time.

3. **Answer:** E

Options: A) employee turnover but not job performance.; B) neither job performance nor health.; C) job performance but not health.; D) neither health nor employee turnover.; E) health but not job performance.

Note: Job satisfaction positively influences health by reducing stress and promoting well-being, while its direct impact on job performance is less clear and often varies depending on other factors.

4. **Answer:** A

Options: A) family dynamics; B) career satisfaction; C) communication skills; D) emotional intelligence; E) insight

Note: Family dynamics are likely to be affected during the first few sessions of psychotherapy because the phase model emphasizes the initial focus on interpersonal relationships and understanding the client's context within their family system.

5. **Answer:** A

Options: A) To conduct psychological tests to diagnose the client; B) To prescribe medication for the client's mental health issues; C) To analyze the client's past traumas in every session; D) To find a cure for the client's issues; E) To judge and evaluate the client

Note: The major task of a Rogerian therapist is to facilitate a supportive and non-judgmental environment that allows clients to explore their feelings and thoughts,

ultimately aiding in the diagnosis of their psychological issues through understanding rather than formal testing.

True / False

6. **Answer:** True

Options: A) True; B) False

Note: Child abuse and neglect disrupt the child's ability to form secure attachments, often leading to a disorganized/disoriented attachment pattern characterized by confusion and fear in relationships.

7. **Answer:** False

Options: A) True; B) False

Note: Kohlberg's theory of gender-role acquisition identifies three stages: gender identity, gender stability, and gender constancy, with gender neutrality not being recognized as a distinct first stage.

8. **Answer:** True

Options: A) True; B) False

Note: The phrase 'Mommy gave me a cookie' demonstrates an understanding of grammar because it follows a recognizable sentence structure and applies rules of verb conjugation, even though it contains an error in the verb form.

9. **Answer:** True

Options: A) True; B) False

Note: The statement is true because Elisabeth Kübler-Ross identified denial as the first stage of her five-stage model of grief, where terminally ill patients often struggle to accept their diagnosis, leading to expressions of disbelief such as "No, it's not possible!"

10. **Answer:** True

Options: A) True; B) False

Note: The statement is true because a mode is defined as the value that appears most frequently in a data set, and since all numbers in the sample appear only once, there is no mode.

Long Form Response

11. **Answer:** Cognitive dissonance, a concept introduced by Leon Festinger, refers to the psychological discomfort experienced when an individual's beliefs, attitudes, or behaviors are inconsistent with one another. This dissonance often leads individuals to adapt their behavior to align with their intentions, thereby reducing the discomfort. For example, a person who values health but smokes may either quit smoking or downplay the health risks associated with smoking to resolve the inconsistency. This process has significant implications for behavior change, as understanding cognitive dissonance can help facilitate learning and motivate individuals to engage in healthier behaviors.

Ultimately, cognitive dissonance serves as a catalyst for personal growth, prompting individuals to reassess their values and make meaningful changes in their lives.

Note: correct because it accurately defines cognitive dissonance as the psychological discomfort arising from conflicting beliefs or behaviors, illustrates this with a relevant example, and discusses how individuals may change their behavior or beliefs to alleviate the dissonance, thereby linking the concept to behavior change and the learning process.

12. **Answer:** The emotional content of verbal materials significantly enhances their learning effectiveness due to its influence on memory retention and engagement. According to the Dual Coding Theory, information that evokes strong emotions is processed both verbally and visually, creating richer cognitive associations that facilitate recall. Research has shown that emotionally charged narratives or examples lead to better retention of information compared to neutral content, as emotions activate the amygdala, which plays a crucial role in memory consolidation. Additionally, the Strength of Emotion Theory posits that emotionally intense experiences are more likely to be remembered, reinforcing the idea that learners are more engaged and motivated when the material resonates with them on an emotional level. Thus, incorporating emotional elements into verbal materials can lead to more effective learning outcomes.

Note: correct because it effectively links the emotional content of verbal materials to enhanced memory retention and engagement through the Dual Coding Theory, supported by research demonstrating that emotionally charged information leads to better recall.
