

Multiple Choice (10 marks)

1. According to Jellinek (1952) what progression does the life of an alcoholic usually follow?
 - (a) Onset phase, abuse phase, dependency phase, abstinence phase
 - (b) Prealcoholic phase, alcoholic phase, recovery phase, relapse phase
 - (c) Initial phase, adaptive phase, dependent phase, deteriorative phase
 - (d) Experimental phase, social use phase, intensive use phase, compulsive use phase
 - (e) Initial phase, middle phase, crucial phase, termination phase
2. The classic aging pattern is defined as a decline on which subtest(s) of the Wechsler Adult Intelligence Scale-Revised
 - (a) Arithmetic and Digit Span subtests
 - (b) All subtests except Block Design
 - (c) Similarities and Picture Completion subtests
 - (d) Vocabulary subtest only
 - (e) All Performance subtests
3. Discuss the relationship between arousal and motivation.
 - (a) Motivation can exist without any form of arousal.
 - (b) Arousal level is a central aspect of motivation.
 - (c) Motivation is the cause of arousal.
 - (d) Motivation is a by-product of arousal.
 - (e) High arousal always maximizes motivation.
4. The denominator term in the F-ratio is reduced in magnitude by:
 - (a) decreasing both within-group and between-group variability.
 - (b) increasing both within-group and between-group variability.
 - (c) increasing between-group variability only.
 - (d) increasing within-group variability.
 - (e) decreasing between-group variability only.
5. "According to the elaboration likelihood model, a person is most likely to rely on the "central route" for processing information when:"
 - (a) "the message is within his "latitude of acceptance.""

- (b) he is in a neutral or slightly negative mood.
- (c) the message is outside his "latitude of acceptance."
- (d) everyone else in the group disagrees with the message.
- (e) everyone else in the group agrees with the message.

True / False (10 marks)

Answer True or False

- 6. True or False: Behavioral therapy primarily focuses on exploring clients' dreams and unconscious thoughts to facilitate healing.
- 7. True or False: Animals can easily associate a conditioned stimulus with an unconditioned stimulus when both are presented simultaneously.
- 8. True or False: Erikson's stage of autonomy vs. shame and doubt corresponds to the same age range as Freud's phallic stage of psychosexual development.
- 9. True or False: Cognitive dissonance theory suggests that individuals seek consistency in their own beliefs rather than others' behaviors.
- 10. True or False: Multiple-choice questions are often definitional rather than conceptual, making them easier to answer than fill-in questions.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

- 11. Discuss the research findings on gender differences in conversation styles, focusing on how women's tendency to ask more questions influences communication dynamics.
- 12. Analyze the influence of Henry Murray's theory of motivation on David McClelland's Achievement Motivation model, focusing on the role of individual needs and their impact on behavior.
