

Multiple Choice (10 marks)

1. Which step should a student do in order to be able to repeat an experiment?
 - (a) do the experiment many times
 - (b) keep a record of all procedures
 - (c) make a model of the set-up of the experiment
 - (d) change some of the conditions of the experiment
2. Leopard's opening chant suggests that he is
 - (a) unhappy.
 - (b) confused.
 - (c) confident.
 - (d) generous.
3. What do the energy resources uranium and coal have in common?
 - (a) They both are formed from the remains of dead organisms.
 - (b) They both are acquired by mining the lithosphere.
 - (c) They both release energy through combustion.
 - (d) They both generate radioactive wastes.
4. Many different plant and animal species live in the Amazon rainforest. Which is the most likely result of large areas of deforestation in the Amazon rainforest?
 - (a) an increase in animal populations
 - (b) a decrease in oxygen production
 - (c) an increase in precipitation
 - (d) a decrease in pollutants
5. Why does a town in the desert rarely experience early morning fog as compared to a town along the coast?
 - (a) There is less rainfall in the desert.
 - (b) Temperatures vary more in the desert.
 - (c) There is less water vapor in the desert air.
 - (d) There are fewer plants in the desert.

True / False (10 marks)

Answer True or False

6. True or False: The gravitational pull of the Sun is responsible for the Moon's synchronous rotation and the visibility of its surface from Earth.
7. True or False: Fossil fuels are called nonrenewable resources because they are buried far underground.
8. True or False: Biological magnification of pollutants is most pronounced in estuaries due to their rich biodiversity and nutrient accumulation.
9. True or False: The Moon is less bright than the Sun, making it safer to look at without damaging your eyes.
10. True or False: A wildfire can dramatically change an ecosystem in just one day by destroying vegetation and altering habitats.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss how data from similar studies can strengthen the conclusions drawn by a lab group investigating plant growth rates near a classroom window.
12. Discuss the effects of decreasing the heat energy of a gas. How does this change impact its properties and behavior? Provide examples to support your analysis.
