

Multiple Choice (10 marks)

1. How did scientists arrive at the theory of plate tectonics?
 - (a) by determining the age of lava rising at ocean ridges
 - (b) by determining the composition of limestone deposits
 - (c) by determining the rate of weathering of mountain ranges
 - (d) by determining the type of sedimentary rock formed on land
2. A caterpillar eats an oak leaf. Which of the following best describes the energy transfer in this situation?
 - (a) Both the caterpillar and the leaf gain energy.
 - (b) Energy is transferred from the leaf to the caterpillar.
 - (c) Decomposers in the leaf obtain energy from the caterpillar.
 - (d) The oak tree gains energy when the caterpillar eats the leaf.
3. Which of the following must get nutrients from a transport system?
 - (a) amoeba
 - (b) euglena
 - (c) skin cell
 - (d) bacterial cell
4. What is the proper procedure for safely disposing of an acid solution after finishing an experiment?
 - (a) pour the solution down the sink
 - (b) neutralize the solution with a base
 - (c) dilute the solution with more acid
 - (d) absorb the liquid with paper towels
5. What is formed when a neutral atom gains an electron?
 - (a) A mixture
 - (b) An ion
 - (c) A molecule
 - (d) A metal

True / False (10 marks)

Answer True or False

6. True or False: Water vapor exists in the atmosphere as an invisible gas.
7. True or False: Heat transferred through the ice cube by convection caused it to melt.
8. True or False: Comparing the skeletons of a recent fish and an ancient fish can illustrate the evolutionary changes in fish species.
9. True or False: The albumen is the clear, thick fluid inside a poultry egg that provides protection for the developing embryo.
10. True or False: Desert animals are more active at night because they can absorb sunlight while they sleep during the day.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the similarities and differences in the reproductive methods of euglena and paramecium, highlighting the significance of these processes in their life cycles.
12. Discuss the properties of the mixture of salt and water used for cleaning contact lenses, and explain why this combination is effective for this purpose.
