

Multiple Choice (10 marks)

1. Data in tables may also be presented in graphs. Which type of data would best be displayed on a circle graph?
 - (a) the distance of the planets from the sun
 - (b) the depths of the major oceans on Earth
 - (c) the amount of rainfall each day for a month
 - (d) the percent of various materials in solid waste
2. Forests have been cut and burned so that the land can be used to raise crops. Which consequence does this activity have on the atmosphere of Earth?
 - (a) It reduces the amount of carbon dioxide production.
 - (b) It reduces the production of oxygen.
 - (c) It decreases the greenhouse effect.
 - (d) It decreases pollutants in the air.
3. A student wants to use a stream table to test the influence of water acidity on the erosion rate of a stream. Which variable should be constant in this experiment?
 - (a) angle of tilt of the table
 - (b) acidity of the water
 - (c) amount of sediment eroded
 - (d) rate that sediment is eroded
4. Some animals live in a grassland. A fire burns through the grassland. Which type of animal will best compete for resources after the fire?
 - (a) one that eats meat
 - (b) one that uses plants for shelter
 - (c) one that lives under the ground
 - (d) one that builds nests on the ground
5. A boy can see his face when he looks into a calm pond. Which physical property of the pond makes this happen?
 - (a) flexibility
 - (b) reflectiveness
 - (c) temperature
 - (d) volume

True / False (10 marks)

Answer True or False

6. True or False: Mushrooms primarily grow by using sunlight and photosynthesis, similar to plants.
7. True or False: Heat energy is absorbed when a gas changes directly into a solid.
8. True or False: The foam ball model should have the ability to revolve around the central ball to accurately represent a solar eclipse.
9. True or False: Honeybees play a crucial role in helping thousands of plant species reproduce through pollination.
10. True or False: Gravity on Earth is primarily caused by the rotation of the Earth around its axis.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the smallest unit of copper that retains its elemental properties, explaining how its structure influences its characteristics and applications in electrical wiring.
12. Discuss the importance of thirst and sweating during exercise. How do these physiological responses help individuals recognize the need for hydration?
