

Multiple Choice (10 marks)

1. Snow, rain, hail, and fog are all forms of
 - (a) gas.
 - (b) water.
 - (c) wind.
 - (d) clouds.
2. Which statement correctly describes a physical characteristic of the Moon?
 - (a) The Moon is made of hot gases.
 - (b) The Moon is covered with many craters.
 - (c) The Moon has many bodies of liquid water.
 - (d) The Moon has the ability to give off its own light.
3. Which piece of equipment would be used to measure the volume of rain in a rain gauge?
 - (a) double pan balance
 - (b) graduated cylinder
 - (c) centimeter ruler
 - (d) thermometer
4. Which is the most reliable way to get unbiased results when conducting a controlled experiment?
 - (a) Use more than one control group.
 - (b) Try a different experimental group.
 - (c) Change the hypothesis if it is incorrect.
 - (d) Repeat the procedure exactly the same each time.
5. A species lives in a region that changes over time from temperate to tropical. The survival of the species will be most probable if the species can do which of the following?
 - (a) reduce the energy requirements
 - (b) adapt to exploit changed resources
 - (c) interbreed with similar tropical organisms
 - (d) emigrate before the change is complete

True / False (10 marks)

Answer True or False

6. True or False: Hot soup warms a metal spoon handle mainly through the process of conduction.
7. True or False: Solar power is a renewable energy source that has minimal negative impact on the environment.
8. True or False: Burning coal causes slow changes in ecosystems due to the release of pollutants that affect air and water quality over time.
9. True or False: Leaves of a plant primarily function to produce flowers and seeds.
10. True or False: Ocean waves move more easily than continental rock, which affects weather over land.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss why the Sun appears larger than other stars, despite many being much larger in size. Consider factors such as distance, brightness, and human perception in your explanation.
12. Discuss how the body's mechanisms for heat release during and after exercise contribute to temperature regulation and overall performance.
