Long Form Response

11. **Answer:** Current research findings indicate that most men married to working women do not share housework and childcare obligations equally with their spouses, highlighting a persistent imbalance in domestic responsibilities. This division of labor reinforces traditional gender roles, where women remain primary caregivers and homemakers despite their professional commitments. Such dynamics not only perpetuate gender inequality but also affect women's career advancement and overall well-being. As both partners juggle work responsibilities, the disproportionate allocation of domestic tasks can lead to increased stress and conflict within marriages, ultimately impacting family dynamics and societal perceptions of gender roles. Addressing these disparities is crucial for fostering equality in both the workplace and home, thereby supporting a more

equitable distribution of responsibilities among couples.

Note: The answer correctly identifies the unequal distribution of housework and child-care responsibilities among married couples where both partners work, illustrating how this imbalance perpetuates traditional gender roles and negatively impacts women's career progression and well-being.

12. **Answer:** In sociology, an aggregate refers to a collection of individuals who come together in a specific location but do not share a common identity or interact meaningfully. The scenario of seven people waiting silently at a bus stop exemplifies this concept, as these individuals are physically present in the same space but lack any significant social connection or purpose beyond awaiting transportation. This situation highlights the characteristics of an aggregate, such as the absence of structured relationships or shared goals, as the individuals may not engage in conversation or form a cohesive group. Instead, their proximity is purely coincidental, underscoring the distinction between aggregates and more integrated social entities like groups or communities. Thus, the bus stop scenario effectively illustrates how aggregates are defined by their lack of interaction and shared identity, despite their simultaneous presence.

Note: correct because it clearly defines an aggregate as a collection of individuals who share a physical space without meaningful interaction or shared identity, effectively illustrated by the example of seven people silently waiting at a bus stop.
