

Multiple Choice

1. **Answer:** D

Options: A) a minority group who fill all the top positions of political authority; B) a coalition of social forces with specific skills and abilities; C) a group who circulate between high status positions and exclude others; D) all of the above

Note: Mosca and Pareto identified the ruling elite as a cohesive group that maintains power through various means, including social, economic, and political strategies, thus encompassing all relevant characteristics outlined in the answer choices.

2. **Answer:** A

Options: A) decreased rates of prostitution and sex tourism; B) developing countries can depend on it as a crucial source of income; C) the exploitation of cheap, unregulated labour in poor countries; D) we have become more aware of 'other' societies and ways of living

Note: The correct answer is based on the fact that global tourism often leads to an increase in prostitution and sex tourism, rather than a decrease, highlighting the negative social consequences associated with the tourism industry.

3. **Answer:** C

Options: A) there are no clearly defined projects into which the money can be directed; B) the United Nations has refused to call on rich countries to provide it; C) debt repayments with interest can be greater than the amount of money received; D) debt repayments with interest can be greater than the amount of money received

Note: The correct answer highlights that the financial burden of debt repayments, which often includes high interest rates, can exceed the initial economic aid received, thereby hindering the intended modernization efforts in developing countries.

4. **Answer:** B

Options: A) recognised as breaking an important norm of behaviour; B) seen a temporary aberration from an otherwise 'normal' character; C) the first step in establishing a deviant career; D) attributed to the person's genetic or anatomical make up

Note: The correct answer reflects the sociological understanding that normalizing a deviant act frames it as a temporary deviation from established social norms rather than a fundamental change in character, highlighting the fluidity of social definitions of normality.

5. **Answer:** D

Options: A) industrial capitalism separated the middle class home from the workplace; B) those who enter paid employment have been 'sidelined' into particular fields; C) it is difficult to succeed in 'malestream' politics without compromising their femininity; D) all of the above

Note: The correct answer "all of the above" reflects the multifaceted nature of women's

exclusion from the public sphere, encompassing social, economic, and cultural factors that collectively reinforce gender inequality and limit women's participation in public life.

True / False

6. **Answer:** True

Options: A) True; B) False

Note: The Fashion Sensibility Survey is conducted by private organizations or academic institutions rather than being a standard national survey administered by the British government.

7. **Answer:** True

Options: A) True; B) False

Note: Marx believed that through shared experiences and struggles, the working class would develop a collective consciousness that would empower them to recognize their common interests and unite for social and economic change, thereby evolving into a 'class for itself.'

8. **Answer:** False

Options: A) True; B) False

Note: Frank's theory of dependency suggests that 'underdeveloped' societies are not inherently resistant but rather are often exploited and marginalized by global economic systems, indicating their complex interactions rather than outright resistance.

9. **Answer:** False

Options: A) True; B) False

Note: The 'absolute' poverty line is defined by a fixed threshold of income or resources necessary to meet basic needs, rather than being determined by relative societal norms and values, which characterize 'relative' poverty.

10. **Answer:** False

Options: A) True; B) False

Note: Peer groups are not the primary agents of socialization in early childhood; rather, family and caregivers play a more significant role in shaping children's initial development and social skills during this formative period.

Long Form Response

11. **Answer:** Auguste Comte's contribution to sociology is profoundly significant as he is credited with coining the term "sociology" and establishing it as a distinct discipline in the 19th century. His work marked a pivotal shift in social thought, moving away from speculative philosophy towards a scientific approach to studying society. Comte proposed a systematic methodology for examining social phenomena, emphasizing the importance of empirical observation and the use of scientific methods, which laid the

groundwork for future sociological research. This endeavor reflected the broader intellectual climate of the time, characterized by an increasing reliance on reason and science to understand human behavior and social structures. Consequently, Comte's ideas not only formalized the study of society but also influenced subsequent thinkers, establishing a framework that continues to inform contemporary sociology.

Note: correct because it accurately identifies Auguste Comte as the founder of sociology, highlights his introduction of a scientific methodology for the study of society, and contextualizes his contributions within the broader shift in 19 th-century social thought from philosophical speculation to empirical and systematic analysis.

12. **Answer:** In the nineteenth century, naturalistic explanations of race were predominantly influenced by biological determinism and the emerging fields of anthropology and ethnology. Factors such as skin color, cranial measurements, and hair texture were emphasized as indicators of racial superiority or inferiority, aligning with the prevailing ideologies of colonialism and social Darwinism. Height, however, was often overlooked as a significant racial marker, possibly due to its less distinct correlation with social hierarchies and the complexities of environmental influences on physical development. This neglect reflects a tendency to prioritize traits that could be simplified into rigid classifications, thereby reinforcing existing power dynamics rather than acknowledging the multifaceted nature of human variation. By focusing on easily observable characteristics, scholars of the time failed to engage with the broader social and environmental factors that shape human diversity.

Note: correct because it accurately identifies the emphasis on biological determinism and specific physical traits in the racial discourse of the nineteenth century, while also noting the overshadowing of height as a less relevant factor in the context of prevailing colonial and social Darwinist ideologies.
