

Multiple Choice

1. **Answer:** D

Options: A) this pattern of speech made them the target of bullying; B) they referred to explicit, context independent meanings; C) they prevented children from communicating outside of their peer groups; D) they involved short, simple sentences with a small vocabulary

Note: Bernstein argued that 'restricted codes' limit the complexity and richness of language used by pupils, which can hinder their ability to engage with and understand the more elaborate and abstract language often employed in academic settings, ultimately disadvantaging them in school.

2. **Answer:** D

Options: A) flexibility was reduced by the introduction of detailed daily worksheets; B) the state had greater control than managers over production processes; C) ownership was transferred from small shareholders to senior managers; D) employment depended on performance rather than trust and commitment

Note: The correct answer highlights that privatization shifted the focus of employment relationships from traditional values of trust and commitment to a performance-based evaluation, reflecting a broader sociological trend towards accountability and measurable outcomes in organizational settings.

3. **Answer:** D

Options: A) it is committed on a larger, often global, scale, and is well organized; B) it is associated with political conflict between states and their citizens; C) it can have far-reaching effects upon international relations; D) all of the above

Note: The correct answer "all of the above" is appropriate because terrorism encompasses political motivations and ideological goals that differentiate it from the individualistic and social disorganization perspectives on crime emphasized by the Chicago School, which primarily focus on social context and neighborhood influences rather than organized, politically charged violence.

4. **Answer:** D

Options: A) an urban set, involved in civic bodies and voluntary associations; B) too diverse to have a strong sense of class consciousness; C) often involved in 'white collar' work; D) all of the above

Note: The correct answer "all of the above" is accurate because the middle classes of the nineteenth century were characterized by diverse socio-economic factors, including increased educational opportunities, the rise of professional occupations, and shifts in consumer culture, all contributing to their complex identity and influence in society.

5. **Answer:** C

Options: A) participated in the same leisure pursuits and events of the 'social calendar';

B) emulated the lifestyle and cultural values of the traditional aristocracy; C) owned companies and financial assets that generated wealth through corporations; D) had direct, personal ownerships of land and businesses as physical assets

Note: The correct answer reflects the key concept that the capitalist class of the mid-twentieth century accumulated wealth and social status by owning and controlling corporations and financial assets, which established their position within the upper class.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: In stage 3 of the 'health transition', the prevalence of acute infectious diseases declines significantly as chronic diseases such as heart disease and diabetes become the leading causes of illness and death due to improvements in public health, sanitation, and medical care.

7. **Answer:** False

Options: A) True; B) False

Note: The statement is false because research consistently shows that men are disproportionately involved in violent crime compared to women, indicating significant differences in aggression levels and socialization between genders.

8. **Answer:** False

Options: A) True; B) False

Note: The social democratic model prioritizes collective welfare and state intervention in the economy, aiming to regulate wages and prices to ensure social equity, rather than emphasizing individualistic self-reliance and deregulation.

9. **Answer:** True

Options: A) True; B) False

Note: The growing fear of HIV and AIDS emerged in the 1980 s, significantly influenced by the New Right's reaction to the sexual revolution of the 1960 s, which challenged traditional norms and led to increased visibility of alternative sexual practices that were later associated with the spread of the virus.

10. **Answer:** False

Options: A) True; B) False

Note: A document cannot be considered 'authentic' solely based on its ability to represent similar documents that did not survive, as authenticity is defined by the document's origin, context, and integrity rather than its completeness or representational value.

Long Form Response

11. **Answer:** Globalization has significantly altered the power dynamics of nation-states by challenging traditional state authority in various ways. One major implication is the rise of transnational corporations and international organizations, which often hold economic and political power that can rival or even surpass that of sovereign states. Additionally, the flow of information and ideas across borders diminishes the control that states have over their populations, as citizens are increasingly influenced by global cultures and ideologies. Furthermore, issues such as climate change and terrorism require cooperative international responses, which can undermine the unilateral decision-making power of nation-states. Thus, while globalization extends the power of nation-states in some areas, it simultaneously complicates their authority and autonomy in the face of interconnected global challenges.

Note: correct because it identifies the emergence of transnational corporations and international organizations as powerful entities that undermine state authority, alongside the global dissemination of information that empowers citizens and reduces state control.

12. **Answer:** Wallerstein's concept of a 'world system' situates the capitalist world economy as a complex, interconnected structure characterized by a global division of labor that transcends ethnic and cultural boundaries. Within this system, various regions and groups contribute to the production and consumption processes in distinct ways, often based on historical and socio-economic contexts. The significance of this division of labor lies in its role in perpetuating inequalities and reinforcing power dynamics, as certain ethnic and cultural groups may be relegated to peripheral roles while others dominate core economic activities. Consequently, the capitalist world system not only reflects but also shapes the interactions among diverse cultural groups, illustrating how economic practices are deeply embedded in social relations and cultural identities. This framework allows sociologists to analyze the implications of globalization and the uneven development that arises from these interconnected labor divisions.

Note: This answer is correct because it accurately captures Wallerstein's framework of a world system by highlighting the interconnected nature of the capitalist economy and the critical role that a global division of labor plays in shaping socio-economic inequalities among diverse ethnic and cultural groups.
