

Multiple Choice

1. **Answer:** D

Options: A) this pattern of speech made them the target of bullying; B) they referred to explicit, context independent meanings; C) they prevented children from communicating outside of their peer groups; D) they involved short, simple sentences with a small vocabulary

Note: Bernstein believed that 'restricted codes' limited students' ability to express complex ideas and engage in abstract thinking due to their reliance on short, simple sentences and a limited vocabulary, which could disadvantage them academically.

2. **Answer:** A

Options: A) embrace conventional cultural values but offer new means of achieving them; B) react against the loss of any meaningful religious content in the teachings of churches; C) adopt an attitude of mild disapproval towards mainstream social values; D) reject both the goals and means of conventional society and provide utopian alternatives

Note: World-affirming religions integrate and validate existing societal values while providing alternative practices and beliefs that enable adherents to pursue personal fulfillment and success within those cultural frameworks.

3. **Answer:** C

Options: A) fixed-choice questions; B) short questions; C) leading questions; D) funnelled questions

Note: Leading questions can bias respondents' answers and distort the survey's findings, making them less reliable and valid.

4. **Answer:** A

Options: A) schools prepare children for work by teaching them to be obedient; B) teachers and parents tend to have similar attitudes to learning; C) children who write lots of letters develop a better grasp of language; D) boys' and girls' educational achievements have recently become similar

Note: The 'correspondence principle' posits that the structure and practices of schools mirror the hierarchical and authoritarian nature of the workplace, thereby socializing students into obedience and conformity, which are essential traits for future employment.

5. **Answer:** D

Options: A) ethnic minorities practised religion to achieve social acceptance in the culture; B) mainstream faiths were becoming increasingly identified with national identity; C) the moral teachings of the main religions were becoming relatively similar; D) all of the above

Note: Herberg's (1955) study of religion in America identified multiple dimensions of

religious experience, including the role of religion in social identity, the interaction between different faiths, and the impact of religious pluralism, thus making "all of the above" the correct answer as it encompasses the comprehensive findings of his research.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: The statement is false because the Mafia is traditionally known for its involvement in organized crime activities such as extortion, racketeering, and violence, rather than primarily focusing on white-collar crimes like fraud and financial manipulation.

7. **Answer:** False

Options: A) True; B) False

Note: The statement is false because, while cottage industries did see a rise during the nineteenth century, women were typically relegated to low-status, labor-intensive roles rather than high-status managerial positions in production.

8. **Answer:** True

Options: A) True; B) False

Note: Human behavior is influenced by complex social, cultural, and contextual factors that lead to meaningful variations among individuals and societies, distinguishing sociological inquiry from the more uniform and predictable phenomena studied in the natural sciences.

9. **Answer:** True

Options: A) True; B) False

Note: The statement is true because moral panics arise when media sensationalizes the behaviors or characteristics of deviant groups, resulting in disproportionate fear and societal backlash, as evidenced by historical instances where public perception was significantly influenced by media portrayals.

10. **Answer:** True

Options: A) True; B) False

Note: Murray's characterization of the 'underclass' in his work emphasizes their perceived moral deficiencies, dependency on welfare systems, and assumptions about their intelligence, which collectively contribute to the broader societal stigma associated with this group.

Long Form Response

11. **Answer:** Scapegoating in sociology refers to the practice of unfairly blaming an individual or group for problems that are often beyond their control, thereby diverting attention from the true sources of societal issues. This mechanism can exacerbate social dynamics by fostering division and hostility within communities, as it encourages

the vilification of scapegoated groups, often marginalized minorities. The implications of scapegoating are profound; it can perpetuate cycles of oppression and conflict, ultimately hindering societal progress and understanding. By recognizing scapegoating as a social phenomenon, scholars can better analyze how prejudice and power dynamics shape responses to complex societal problems, revealing the need for a more nuanced approach to conflict resolution and social justice.

Note: correct because it accurately defines scapegoating as the unjust attribution of blame to individuals or groups for broader societal issues, while also highlighting its divisive effects on social dynamics and its role in perpetuating oppression and conflict.

12. **Answer:** The functionalist perspective in sociology posits that every aspect of society serves a purpose in maintaining social order and stability, akin to the organs of a body working together for overall health. It emphasizes the interdependence of social institutions, such as family, education, and religion, which collectively contribute to the functioning of society. For example, the family unit instills cultural values and social norms in its members, fostering cohesion and continuity. Similarly, education serves to equip individuals with skills necessary for economic productivity while promoting social integration. By highlighting the roles these institutions play in reinforcing societal norms and values, functionalism illustrates how they collectively contribute to social stability.

Note: The answer correctly outlines the functionalist perspective by illustrating how various social institutions work interdependently to promote social order and stability, with specific examples demonstrating their roles in instilling values and norms within society.
