

Multiple Choice

1. **Answer:** C

Options: A) the use of corporal punishment by employers; B) excluding women from participating in waged labour; C) punctuality, uninterrupted work and the threat of dismissal; D) making routine tasks less monotonous

Note: The correct answer highlights the key aspects of disciplinary power in 19 th-century factories, where punctuality and uninterrupted work were enforced through strict regulations and the looming threat of dismissal, thereby exemplifying the control mechanisms that shaped labor practices during the Industrial Revolution.

2. **Answer:** D

Options: A) they increase our awareness of risks that affect the whole planet; B) they appeal to universal values and human rights; C) they use global media to generate publicity; D) all of the above

Note: The correct answer "all of the above" is supported by the understanding that environmentalist social movements exhibit global interconnectedness, transcending national boundaries to address shared environmental issues, mobilize diverse communities, and influence international policy, reflecting the multifaceted nature of social movements in a globalized context.

3. **Answer:** B

Options: A) the ideology process; B) the exploitation process; C) the policy-formation process; D) the candidate-selection process

Note: Domhoff did not identify the exploitation process as a decision-making mechanism in the USA, as his work primarily focuses on the role of elite networks and institutional arrangements in shaping policy decisions rather than exploitation as a decision-making process.

4. **Answer:** C

Options: A) a shared sense of identity and belonging together; B) common activities involving all-round relationships; C) a fixed geographical location; D) collective action based on common interests

Note: Fulcher & Scott identify various criteria for community, such as social ties and shared values, but do not consider a fixed geographical location as a necessary criterion, emphasizing that community can exist in non-geographical contexts.

5. **Answer:** D

Options: A) the product they were making; B) the production process; C) each other and humanity in general; D) all of the above

Note: Marx argued that capitalism alienates workers from the products of their labor, the labor process itself, their fellow workers, and their own human potential, leading to a comprehensive form of alienation that affects all aspects of their existence.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: Snowballing is a non-probability sampling technique where existing study subjects recruit future subjects from among their acquaintances, leading to unequal chances of selection for individuals in the population.

7. **Answer:** True

Options: A) True; B) False

Note: The statement is true because joint parenthood after divorce emphasizes the shared responsibility and collaboration of both parents in raising their children, which is essential for the children's well-being and development.

8. **Answer:** True

Options: A) True; B) False

Note: The statement is true because an aggregate is defined as a collection of individuals who are physically present in the same place at the same time but do not necessarily interact or share a common purpose, which accurately describes the situation of the seven people at the bus stop.

9. **Answer:** True

Options: A) True; B) False

Note: Max Weber's typology of social action indeed includes the four categories of instrumentally-rational, value-rational, traditional, and affectual, which are essential for understanding his framework of social behavior and motivations.

10. **Answer:** False

Options: A) True; B) False

Note: Technological surveillance can enhance information access for consumers and employees by providing data-driven insights and facilitating communication, ultimately leading to improved decision-making and efficiency.

Long Form Response

11. **Answer:** Personal documents with closed access, such as a household account book, are crucial for understanding social structures and individual behaviors from a sociological perspective. These documents often reveal insights into the economic practices, consumption patterns, and social hierarchies within a household, reflecting broader societal norms and values. Analyzing the contents of a household account book allows researchers to examine the decision-making processes of individuals, the distribution of resources, and the interplay between economic status and social relationships. Furthermore, these documents can shed light on gender roles and family dynamics, highlighting how personal financial management is intertwined with larger cultural and institutional frameworks. Thus, they serve as valuable qualitative data that enrich our understanding of social behaviors and structures.

Note: correct because it emphasizes how closed-access personal documents, like household account books, provide valuable insights into economic practices, social hierarchies, and individual decision-making processes, thereby illuminating broader societal norms and structures.

12. **Answer:** Blauner's (1964) concept of alienation in the workplace highlights how certain industrial settings, particularly in car manufacturing assembly plants, can lead to a significant disconnect between workers and their labor. In these environments, employees often perform repetitive tasks that require minimal skill and creativity, resulting in a sense of disconnection from the final product and a diminished sense of personal agency. This alienation not only affects employee morale and job satisfaction but can also lead to decreased productivity, as workers may feel less motivated to invest in their work when they see it as monotonous and devoid of meaning. The implications of this phenomenon are profound, suggesting that enhancing job enrichment and fostering a more engaged workforce could mitigate feelings of alienation and improve overall productivity in the manufacturing sector.

Note: The answer correctly identifies Blauner's concept of alienation as it relates to the repetitive and low-skill nature of tasks in the car manufacturing industry, which leads to a lack of connection to the work and negatively impacts employee morale and productivity.
