

Multiple Choice

1. **Answer:** A

Options: A) declining profits and rising unemployment; B) the eradication of the welfare state; C) rising divorce rates and the decline of the traditional family; D) an unfortunate twist in fashion sensibility

Note: The term 'crisis of the 1970 s' refers to a period characterized by economic challenges, particularly declining profits and rising unemployment, which were indicative of broader structural issues in the economy, including stagflation and shifts in industrial dynamics.

2. **Answer:** D

Options: A) they had rediscovered themselves as 'new men'; B) their wives were at home and nagged them all the time; C) exciting gadgets like the hoover and electric iron were invented; D) they were unemployed or both partners worked full time

Note: Sullivan's study (2000) found that men engaged in a larger share of housework when they were either unemployed or when both partners worked full-time, as these circumstances often necessitate a more equitable distribution of domestic responsibilities to manage the household effectively.

3. **Answer:** A

Options: A) definitions and indicators can vary, making valid comparisons problematic; B) there are no reliable indicators of such widely contested ideas; C) it takes all the fun out of armchair theorising; D) it has little use for applied, empirical research about the topic

Note: The correct answer highlights that the variability in definitions and indicators of social class across different contexts or studies leads to challenges in making valid comparisons, as operationalization requires consistent and clear measurement criteria.

4. **Answer:** B

Options: A) testing out new research methods to see which one works best; B) isolating and measuring the effect of one variable upon another; C) using personal beliefs and values to decide what to study; D) interpreting data subjectively, drawing on theoretical paradigms

Note: The correct answer reflects the fundamental principle of the experimental method in science, which is to control variables in order to determine the causal relationship between an independent variable and a dependent variable, thereby isolating and measuring their effects.

5. **Answer:** D

Options: A) it involves only small amounts of money; B) the proletariat can outsmart the bourgeoisie; C) the police turn a blind eye to corporate crime; D) it goes undetected in the context of everyday business transactions

Note: White-collar crime is often concealed within the routine operations of businesses, making it difficult to detect and quantify, which contributes to its low visibility in society.

True / False

6. **Answer:** False

Options: A) True; B) False

Note: Eyeballing is a qualitative research technique used to make observations or gather data based on visual assessments, which does not necessitate constant observation of research participants.

7. **Answer:** False

Options: A) True; B) False

Note: Terrorism often arises from complex interactions between local grievances and broader international political conflicts, making it a global issue that cannot be isolated from international relations.

8. **Answer:** True

Options: A) True; B) False

Note: The demographic transition is true because it describes a shift from high birth and death rates to lower birth rates and increased life expectancy, resulting in an ageing population as societies develop economically and socially.

9. **Answer:** False

Options: A) True; B) False

Note: Impersonal rules are indeed a characteristic of bureaucracy, but they are not the sole or defining feature of Weber's ideal type of bureaucracy, which also emphasizes hierarchy, specialization, and a system of formal authority.

10. **Answer:** False

Options: A) True; B) False

Note: Marx did not assert that religion would vanish at a specific percentage of church attendance; rather, he viewed religion as a societal construct that could diminish over time due to changing material conditions and class struggles, not merely through declining attendance.

Long Form Response

11. **Answer:** Socialization is the lifelong process through which individuals acquire the norms, values, behaviors, and social skills necessary for functioning effectively within society. This process is crucial in shaping individual identity, as it influences how people perceive themselves and their roles within various social contexts. Through agents of socialization such as family, education, peers, and media, individuals learn what is expected of them, which helps to foster a sense of belonging and community.

Furthermore, socialization facilitates membership in society by promoting shared understandings and practices, ultimately contributing to social cohesion and stability. In essence, socialization is fundamental not only for personal development but also for the continuity and integration of society as a whole.

Note: correct because it accurately describes socialization as a lifelong process through which individuals learn the norms and values of their society, thereby shaping their identities and facilitating their integration into social groups.

12. **Answer:** Vertical mobility refers to the movement of individuals or groups within a hierarchical social structure, typically characterized by upward or downward shifts in social status or class. This concept has significant implications for social structure, as it reflects the fluidity or rigidity of a society's class system. High levels of vertical mobility can indicate an egalitarian society where individuals have opportunities to improve their social standing through education or employment, fostering a sense of personal agency and identity. Conversely, limited vertical mobility may entrench social stratification, leading to feelings of hopelessness and a diminished sense of self-worth among those unable to advance. Thus, vertical mobility is crucial in shaping both the dynamics of social hierarchies and the identities of individuals within those frameworks.

Note: The answer accurately defines vertical mobility as the movement within a social hierarchy, emphasizing its role in reflecting the fluidity of class systems and its impact on individual opportunities for social advancement, which aligns with sociological perspectives on social structure and identity.
