

Multiple Choice (20 marks)

1. The characteristic of injecting drug users in Asia is/are:
 - (a) Strong family support
 - (b) Low failure rate for rehabilitation centers
 - (c) Remaining a member of the community
 - (d) Both a and c
2. In MSM, early syphilis was found to be associated with:
 - (a) HIV infection
 - (b) Use of methamphetamine
 - (c) Sex with recent internet partners
 - (d) All of the above
3. An organism exposed to wild temperature fluctuations shows very little, if any, change in its metabolic rate. This organism is most probably a
 - (a) ectotherm.
 - (b) endotherm.
 - (c) thermophyle.
 - (d) ascospore.
4. The regional lymphatic drainage of the left side of the tip of the tongue is to the
 - (a) left submental lymph node.
 - (b) left and right submental lymph nodes.
 - (c) left submandibular lymph node.
 - (d) left and right submandibular lymph nodes.
5. A plant grows in the opposite direction of the gravitational force. This is an example of
 - (a) positive thignotropism
 - (b) negative phototropism
 - (c) positive phototropism
 - (d) negative gravitropism
6. Bone mineral accretion

- (a) Is rapid in the first 10 weeks of foetal life
 - (b) Is slow in infancy
 - (c) In childhood, adolescence and young adulthood predicts risk of fracture in old age
 - (d) Is particularly high after the menopause in women
7. Which of the following diseases is not caused by togaviruses?
- (a) Chikungunya
 - (b) Rubella (German measles)
 - (c) Western Equine encephalitis
 - (d) Yellow Fever
8. What is the difference between LCD and VLCD?
- (a) VLCD provides less energy than LCD and usually does not include natural foods
 - (b) LCD provides less energy than LCD and usually does not include natural foods
 - (c) LCD provides less energy than VLCD and usually includes natural foods
 - (d) VLCD provides less energy than LCD and usually includes natural foods
9. A baby born with pulmonary hypoplasia secondary to oligohydramnios caused by renal agenesis would be classified as having:
- (a) an association.
 - (b) a dysplasia.
 - (c) a sequence.
 - (d) a syndrome.
10. What is the morphology of the Dane particle?
- (a) Double shelled icosahedron
 - (b) Lipid membrane free icosahedron
 - (c) Flexuous and filamentous morphology
 - (d) Numerous small particles

True / False (20 marks)

Answer True or False and justify briefly.

1. True or False: The correct answer to 'What are the main metabolites of alcohol metabolism?' is 'Acetaldehyde, acetate,'.
2. True or False: The correct answer to 'If the foot is abducted, it is moved in which direction?' is 'Upward'.
